THE BUSINESS OUTLOOK

Though the market for stocks and bonds improved yesterday, the business records of the week show some recession, with steel and electric power production down, the commodity price level slightly lower, and the automobile industry in some confusion. The Bank of England reduced its rate to $3\frac{1}{2}$ per cent.

OT much change in the business situation appears on the face of this week's records. There are a number of recessions in various branches of production which show that the government's

financial remedies have not yet extended their hoped-for effects to the temper and pace of business. The securities markets up to the close of yesterday had shown some rather irregular gains in bonds, while stock prices showed little strength until yesterday's close. The effects of the Washington financial measures have been perhaps slightest in the field of stock prices, and it was in some measure a good showing that stocks showed so slight a response to the shock of the Kreuger suicide.

shock of the Kreuger suicide.

Perhaps the most notable feature of the week's records is the recession in the rate of steel ingot production, which for the industry as a whole has declined by 2 per cent to only 25 per cent of capacity. This low figure at a time when steel production is normally approaching its highest point for the year is strongly indicative of the depressed state of business, for it speaks not only of inactivity in railroad and automobile construction, and in building operations requiring structual steel, but of a low level of tool manufacture and the numberless other forms of manufactures of steel which make so large a feature in the business of the country. Railroad buying, in spite of a few orders, continues at a low ebb for the quite obvious reason

that the carriers have no funds, or practically none, to spend on maintenance of track and equipment. The long-hoped-for Ford orders for large quantities of automobile steel continue to lurk in the future, and no other demand has arisen to take the place of these two that are missing. The Iron Age composite prices are unchanged this week, the stability in the case of finished steel being in some part, no doubt, a result of the general policy of keeping up prices.

The automobile industry continues to make a disappointing showing. Estimated total production last week was reported by Cram at nearly 800 units lower than the week before, despite the numbering of Henry Ford's first eight-cylinder car and the production of an unknown but probably small number of the new four-cylin-der model. All reports go to show that while Mr. Ford's ann of the new models has thrown the industry on the low-price side into a state of much reduced animation, his own contributions have added nothing to the total of visible activity. The suspicion grows that the Ford sales campaign promises a rather dubious intensity for the immediate present. The Annalist Index of Business Activity on another page shows the effects of this hold-up on the industry last month in a lowering of the automobile production index-by nearly 8 points.

Electric power output by the public utilities affords some very interesting comparisons with last year. In the article elsewhere on The Annalist Index of Business Activity, Table A (Continued on Next Page)

presents comparisons of January of this year with January of last on four classes of power consumption. It is shown there that household consumption in January of this year was 2 per cent higher than last year; while for three other classes, business lighting, industrial power and traction power, the consumption was markedly lower than a year ago.

Last week electric power output increased against the usual downward seasonal movement, with the consequence that the adjusted index for last week rose to 72.3 from the 71.2 of the preceding week. The cold weather was the probable reason for the increased use of current. The decline in output last week as compared with corresponding week of last year was 8.2 per cent, which is one-half of 1 per cent less than the comparative decline in the preceding week. By regions, the central industrial region shows a smaller deficiency than in the week before, quite probably accounted for by the change in weather; the deficiency in the Pacific Coast region, which was not affected by the cold wave, was, on the other hand, greater than in the preceding week.

The commodity price level has not ceased its waverings, and this week is a trifle lower, The Annalist Index standing at 91.4 in comparison with 91.8 last week and 91.3 two weeks ago. The downmovement was due to lower prices for the grains, live stock, sugar, bitu-minous coal and copper; advances in meats, dairy products and gasoline did not offset the losses in the other comand gasoline did modities. The losses were heaviest in the farm products group, the index of which d to a new low of 74.1, marking a loss of 25.7 per cent from its level of a year ago, and of 50.3 per cent from its sition on July 16, 1929, when its recent long decline began. In the food products group, on the contrary, most of the meats, together with butter, showed ad-The fall in the price of copper to 5.75 cents for electrolytic delivered New York, is an impressive example of the delayed demand for the commodities in general. The decision of the recent conference of American and foreign producers to reduce to 20 per cent of capacity may somewhat help the situation, but the remedial results are still in the future.

Freight loadings continue to pre disappointing picture. In the latest week reported, that ended March 15, the total of 559,439 cars was an increase of nearly 24,000 cars over the preceding week, that of the Washington's Birthday holiday, but this rise was less than the normal nal rise for the week, and therefore the adjusted index of loadings is lower. at a new low point for the present de In his article a month ago on The Annalist Index of Business Activity, Mr. Ellsworth pointed out as a striking feature of the decline in freight loadings the fact that less than carload merchandise and the other group of miscellaneous freight had shrunk steadily for many months; and this process cor through the month of February.

strain of the present busines situation lies partly in the discordance between the general public feeling that the difficulties of the banks have been considerably relieved by the government's financial measures, and the absence of any indication of a response on the part of business itself. The belief widely held that an easy money policy vigorously pushed by the Reserve Banks would stimulate business is probably a mistaken belief. Easy money facilitates the expansion of stock speculation when good earnings by companies rurnish a basis upon which the prospects of future earnings can be readily overestimated, with resulting greater enthusiasm in the market. But with respect to business, the prime stimulant is the reasonable certainty of satisfactory profits from w or expanded undertakings; and in the financing of such ventures a difference of 1 per cent in the cost of money is relatively unimportant for the reason that unless reasonably estimated profits are wide enough to absorb without embarrassment a difference of 1 per cent in the cost of money, they are too meager to warrant any borrowing.

Yesterday's action by the Bank of England in lowering its rediscount rate to 3½ per cent proceeds on an opposite theory, but in the case of English business and industry the situation is so different from our own that the action may be considered justified; it is also mixed up with the international position of sterling.

This morning's bank statement shows no very important changes since last week. There was a decrease of money in circulation amounting to 22 millions. Brokers' loans increased 9 millions. The New York Reserve Bank increased by 48 millions its holdings of government certificates, while bills discounted shrank by 32 million. New York member banks, with loans slightly decreased, enlarged their investments by 200 million, presumably the new government certificates.

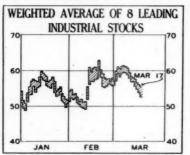

BENJAMIN BAKER.

FINANCIAL MARKETS

THE stock market has suffered a substantial further recession. A number of important issues have been forced through late February support points and a few have equaled early January low records. In spite of its rather severe decline the market has been orderly and at no time has the action of prices suggested anything approaching panic or even aggressive operations for the fall.

The downward movement that began last week continued at an even pace through the current week until Thursday afternoon, when a brisk rally set in. Volume of trading has been light.

The decline has covered a broad front, no important group being able to hold against the general trend. The worst loss has been in the railroad stocks, many of

March	17.								. 5	55.5	52.8	55.1
											weights,	sec

which have fallen to near their January low levels. The motor stocks have also been under pressure and a number of new low levels have been recorded in this group. The steels have declined rather rapidly and have broken their late February support levels. In the retail trade, chemical and public utility groups de-

clines have been less severe. The market has given clear evidence this week that the effect of February's stimulation has worn off. The dramatic announcement of the Glass-Steagall bill last month and the lavish propaganda that accompanied it forced the averages up a dozen points in a few days. But alugh newspaper exaggeration and the driving in of a portion of the short interest may serve to advance stock prices temporarily, they cannot produce an alteration in the fundamental economic situation. And now that the enthusiasm has subsided it is natural enough that the market should tend to return to the level prevailing before the start of the rally.

The breaking of the late February support points by a number of important issues, notably the railroad stocks, must be regarded as an unfavorable omen. More serious resistance is likely to be encountered at the January low levels, however, for a general break through this zone would be regarded by many investors and traders as a major catastrophe.

One of the most important factors in the immediate market outlook is the nature of the first-quarter earnings stateents, which will begin to appear within a little more than a fortnight. In most cases returns will unquestionably make a poor comparison with last year, and computations of probable 1932 totals on, this basis are likely to be disheartening. And while the Reconstruction Finance Corporation may be able to prevent important bankruptcies, it cannot restore earning power. Some observers take the position that even present depressed prices for securities are justified only on the assumption of a substantial business improvement later in the year.

The chief hope of a favorable market turn during the next few months centres about the possibility of a settlement of the European financial difficulties at an economic conference in June. With both German and French elections out of the way, and with France possibly in a more conciliatory mood as a result the decline in her trade, it is conceivable that some solution may be worked out, of a sort that might stand for several years at least. A substantial rise in stock prices would probably ensue such an agreement were arrived at. It will be recalled that the Dawes Plan in 1924 was followed by a sustained rise in the security markets.

The dullness of the stock market this week and the character of the decline suggest that the current restrictions on short selling may be exerting some effect on the timing of the market's downward movements, if not on their extent. Certain Wall Street commentators have alleged that the dog's tail, instead of being amputated neatly at one blow, is being taken off gradually by slow turns of a sausage grinder.

There can be no question that if economic conditions call for a decline in prices it is better for all concerned to get it over with as quickly as possible. If operations of short sellers tend to accelerate a downward movement of prices, they should, under such circumstances, be encouraged rather than restricted.

This morning's statement of the Federal Reserve Banks shows a substantial increase in holdings of government securities, as is usual immediately following the tax date. Holdings of bills bought in the open market, on the other hand, have contracted substantially. The most encouraging feature of the statement is the sharp decline in rediscounts. It seems likely from this that the member banks are not availing themselves of the more liberal rediscounting provisions of the Glass-Steagall bill.

An interesting and encouraging development of the week is the further decline in the amount of money in circulation, both actually and on a seasonally corrected basis. The contraction of the past two months is the most substantial that has taken place since early 1931.

The sterling exchange market has been more stable this week and quotations are slightly lower. French rates have advanced sharply, suggesting a possible resumption of gold withdrawals. Dutch and Belgian rates are higher.

The bond market has tended to react this week in sympathy with stocks.

vised January index of 62.4. The decline

is very small compared with that from

the December index of 65.5 to the Jan-

uary figure. Last month's index com-

pares with 76.2 in February of 1931.

Four of the nine components of the February index for which estimates or

actual figures are available show ad-

vances, four show declines and one is unchanged. In January, one of the nine

components was unchanged from Decem-

ber, while the other eight showed de-

clines. The upward movements in Feb-

ruary were comparatively large in the production of bituminous coal and of

boots and shoes; while the largest decline

sional figure of 62.0,

which is a drop of 0.4

points from the re-

The Annalist Business Index Declines Slightly-

ITH only a slight de-cline, The Annalist Index of Business ac-Some Gains Over January tivity for February and 9 per cent. The reasons for this lag marks, nevertheless, a have already been discussed in THE ANnew low at the provi-

NALIST, the chief influences having been

normal seasonal advance of between 8 Ford cars during the first two months of the year, but these orders have not yet been placed in volume, although both of the new Ford models are reported

poration. It will be noted here that bookings of new orders in February, and also shipments, decreased, while unfilled orders at the end of February are lower than at the end of January by an amount (not given in the table) something more than 100,000 tons.

Electric power production by the public utilities shows some interesting changes, particularly in the somewhat sharper decline of the past few weeks. Table A. on this page, is not only indicative of the state of business activity, but it also answers the question of those who want to know whether the admitted increase in the domestic consumption of electricity does not largely offset the decrease for industrial and other non-household purposes. Inasmuch as domestic consumption is considerably less than half of the total outlook, Table A makes it clear TABLE A. ELECTRIC POWER CON-SUMPTION

Jan., 1932, Compared
With Jan., 1931.
.increase 2 per cent
decrease 6 per cent
decrease 12 per cent
decrease 15 per cent that the three classes which show a considerable decrease outweigh in their significance as to the general course of business the increase for household pur-

poses. The most notable figure in this table is the decrease in electric industrial power. Table VII shows that the first week in March and two weeks in February exhibited practically percentage decrease in the central industrial region, which is the site of the country's heavy

industry.

The course of freight loadings, represented by the daily average adjusted for seasonal variation, continued downward, displaying the same feature that has been so prominent in the statistics of several months past, namely, a continued decrease in the loadings of merchandise less than carload, and of miscellaneous freight, the February index numbers for each of these classes representing new lows since 1919. As total carloadings constitute the most heavily weighted component of the composite index it is unlikely that the latter index will show a wide upward movement until the interchange of goods has assumed a considerably greater volume.

The rise in bituminous coal production is pretty certainly attributable to cooler weather and the greater demand for heat-

As is indicated in Table VIII, a new

is the decline in steel ingot production from the January index in place of a

the practical absence of substantial purchases by the railroads and the small volume of buying by the automobile industry. The steel industry lived in expectation of large orders for the new

under production on a small scale. The course of the industry as a whole is sufficiently indicated in Table IV, which shows bookings, shipments and unfilled orders of the United States Steel Cor-

stability has appeared in cotton cloth, both sales and shipments having been rather closely equated last month to production. Figures issued by the Association of Cotton Textile Merchants in New York show that stocks of carded cotton cloths at the end of February, amounting to 239,654,000 yards, were the smallest since the comparable records were begun in January, 1928.

The decided rise in the index for boot shoe production represents practically the normal seasonal movement for

The outstanding feature in the Februry record of building contracts awarded is the same that appeared in the January, namely, a very low volume of public works and utility contracts. In January, as was noted in this article a month ago. the average daily value of these types of work on a seasonally adjusted basis was \$1,260,000, in contrast with \$2,470,000 in December and \$5,030,000 as recently as last June. In February the average daily onally adjusted rose to \$1,680,-000. Mr. Ellsworth pointed out in last

month's article that this low average daily value was pretty convincing evidence of the ineffectiveness of the public TABLE III. CAR LOADINGS BY GROUPS

Europe From an American Point of View

By HENRY W. BUNN

items of the

days were: The publication of the official report of British foreign trade in February, analysis of which is somewhat

on of the Bank of England's discount rate; the extraordinary upward jump, on March 8, of sterling and allied currencies, attributable, of course, mostly to speculation and very displeasing to British authorities (a considerable part of the gain has since been lost); the German Presidential election on March in which Marshal von Hindenburg rolled up a handsome plurality but just failed of the required majority, so that there must be a second balloting on April 10, when a plurality will suffice; the lowering of the Reichsbank's discount rate; and the rather interesting proce of the extraordinary League Assembly re the Sino-Japanese business.

THE BRITISH COMMONWEALTH

THE chief features of the British Board of Trade's report of British foreign trade in February are as

Total imports were valued at £70,-100,000; exports of British products, £30,010,000: re-exports, foreign goods, £5,450,000; total exports, £35,460,000; excess of imports, £34,640,000.

Exports of British products in February, 1932, totaled less than those of January, 1932, by £1,110,000; re-exports ere greater by £220,000; imports eater by £7,840,000; the excess of ports was greater by £8,730,000.

Exports of British products in Feb ruary, 1932, were valued at £30,010,000; in January, 1932, at £31,120,000; in De cember, 1931, at £32,070,000; in November at £31,860,000: in October at £32,-832,000: in September at £29,840,000.

Imports in February, 1932, were value £70,100,000; in January, 1932, at £62, 260,000; in December, 1931, at £77,020,-000; in November at £83,230,000; in Octoher at £80,605,000: in September at

Exports of British products in February, 1932, totaled less in value than those of February, 1931, by £1,783,000; re-exports were less by £403,000; imwere greater by £6,453,000; the excess of imports was greater by £8,639,000.

In comparing with January, 1932, and February, 1931, the following considera-tions should be borne in mind: Number of working days same for February, 1932, as for January, 1932; one less working day in February, 1931, than in February, 1932; price average about the same for February, 1932, as for February, 1931; New York price of sterling averaged in February, 1932, about 281/2 per cent below February, 1931, whereas total value of British exports in February, 1932, was only about 51/2 per cent below that of uary, 1931; value of British imports in February, 1932, was about 10 per cent above that of February, 1931. No doubt the considerable import increase in February just past was largely due to antici-

On March 10 the Bank of England reduced its discount rate from 5 to 4 per

Presumably of great importance (though we await details) is an agree ment just announced between Imperial Chemical Industries, Ltd., and Continental Dye Manufacturers.

At closing on March 14 on the New York market sterling stood at \$3.62%, as against \$3.52% on March 7. During the same period the Danish krone rose to 19.84 from 19.45 cents; the Norwegian krone rose to 19.64 from 19.29 cents; the Swedish krona rose to 19.54 from 19.45 cents: the lira fell to 5.18 from 5.18% cents; the peseta fell to 7.64 from 7.65 cents; the escudo advanced to 3.32 from 3.22 cents.

March 8 was featured by a very ex traordinary jump of sterling and allied currencies, sterling being quoted at \$3.70% in New York, the Danish krone at 20.44 cents, the Norwegian krone at 20.29 cents, the krona at 20.44 cents and the escudo at 3.42 cents. Main cause, of course, speculation; the reaction of the authorities in London was the reverse of enthusiastic. It is seen that an appreciable part of the gain as to both sterling and allied currencies has since been lost.

In the seven days ended March 9 the gold holdings of the Bank of England were increased by £3,000, though the proportion of the Bank's reserve to liability dropped to 31.19 per cent, as against 36.92 per cent seven days pregold reserve of the Bank of France was increased by 678,000,000 francs.

Analysis of the latest British cens is highly interesting and significant. The population of England and Wales is shown as 44,790,485, the highest ever, but the increase in the decennium covered by the census was the smallest for any census decennium since that ended in 1861 (when the population total was only half that at present), with the exception of the war decade 1911-1921. while the percentage increase, with the same exception, was less than half any other of record. On the other hand, the reduction of the death rate was very extraordinary. The density of population of England and Wales (685 to the square mile) is greater than that of any country of the European Continent except Rel-

On March 9 Eamonn de Valera became President of the Irish Free State Executive Council.

FRANCE

TERTAINLY France is very definitely a poorer country for the death, on March 7, of Aristide Briand; and even the planet as a whole is appreciably poorer. On the 12th there was a national funeral ceremony in Paris at which Premier Tardieu delivered the oration. The body was then taken to Cocherel for burial; the little town near which is the farm beloved above all else by that great and delightful man. You ask why France is so great? Certainly that passion for the soil is a main factor.

Briand was twenty-five times a Minister and eleven times Premier. Certainly few statesmen have fought more gallantly for ideals; and he fought hardest in his closing years, when he was racked by disease and knew that the fight was shortening his days. He was the outstanding paladin of the cause of international conciliation. It remains to see whether or no his supreme Pan-European project dies with him. Scarcely le his meed of fame as co-architect of the Briand-Kellogg pact and as chief architect of the Locarno accord.

Of middle-class stock, educated to the law, Briand began his career as a Socialist and a journalist. He collaborated with Jaurès in founding L'Humanité. Born in 1862, he did not enter the Cham-

most important leader in the fight then being waged against clericalism. Amid such wild passions his leadership exhibited that combination of resolution and amenity so characteristic of him. I am inclined to find the main explanation of his success in a humorous philosophy, that so-rare gift among statesmen; a gift of which the grand exemplar, of course, is Lincoln.

A new phase began in 1906, when Briand accepted the portfolio of Public Instruction and Worship in Sarrien's "bourgeois" Cabinet. The Socialist party expelled him as a "renegade." He formed his first government in 1909. It was now that he executed one of his most famous strokes. A railroad strike menaced revolutionary horrors. Premier Briand called the 30,000 strikers to the colors as re servists and ordered them to protect the railways. They did so and so acceptable as strike. Of course many called this a mere trick, but most agree that under the conditions it was a unique exercise of humorous common sense.

The Briand Government of 1913 increased the period of military service from two to three years; a stupendously important move.

Briand was War Premier for a year and a half, commencing with October, No doubt controversy will continue till the next Ice Age as to his conduct during that supreme crisis. He did or did not exhibit sufficient dourness. any rate, he retired in March, 1917, and did not head the government again until 1921

To my mind his conduct at the Washington arms conference (opened November, 1921) was superb, his chief speech on that occasion even topping that of Lord Balfour. His subsequent career (featured by the Locarno business of 1925, the Briand-Kellogg pact, the demolition of the Austro-German cus-toms pact and the project of Pan-European union) is sufficiently well

I think most will agree that after Clemenceau's death Briand was the world's greatest man.

Paul Hymans, president of the special League Assembly, and Sir Eric Drummond. Secretary General of the League of Nations, attended the ceremonies in Paris as representatives of the League,

Copper Statistics; and Some Facts Which Bear on

HE copper industry is one of great complication and the statistics in respect of it are consequently complicated. It is natural therefore that there should be confusions and misinterpreta-

tions. This article is intended to be elementary and explanatory, rather than economic and deductive, and therefore will consist largely of definitions. Statistics are often employed without consideration of what the statistician means, and inconsistent combinations often are made with the results of error by duplication or omission. There may be failure also to allow for the factor of error in the statistics themselves, some of which may be precise while others may be only approximate.

The production of copper is reported under the heads of primary and secondary. We speak also of primary smelters and secondary smelters.

Primary copper is also described as new copper, as virgin copper, and as mine production.

Secondary copper is understood to mean all that which figures in commerce and in the statistics that is other than new copper. This is, I think, a precise definition, though clumsy; but as commonly used the term secondary copper is loose. If we substitute for it copper derived from (1) junk (reclaimed from use, i. e. by the demolition of automobiles, electric lines, &c.) and (2) copper derived from mill scrap (or manufacturing scrap) the understanding becomes perfect.

'The copper derived from junk is economically equivalent to new supply. A pile of junk in a smelter's yard is in effect a mine that is constantly being replenished. It has to be smelted and refined (except for certain grades).

Mill scrap, on the other hand, is constantly going round and round as a consequence of manufacturing processes, and in general has only to be remelted. In theory, it is of the nature of an industrial working stock and if industrial affairs are in equilibrium, or substantially so, it plays no part, or more correctly said its debits and credits cancel each other; but if we enter upon a period of contracting consumption the squeezing out of surplus in mill scrap inventory has powerful effects; and oppositely in periods of expanding consumption.

Let us now trace the course of copper from the mines to the consumers, especially from the point of view of the statistician. In general, the ore is smelted at, or close to, the mines, and the production of their smelteries is currently in harmony with that of the mines themselves. There are some mines, however, that ship their product in the form of rich concentrates, and the accounting for them has to be on that basis. These movements are so complicated, however, that it is only in respect of the United States that we can account for the production of new copper in just that way, month by month, and in general the statistical beginning is on smeltery basis. This is often described as the blister copper basis, although by no means all of the original copper is produced as blister, and a correct definition of this accounting would be new copper in its first metallic form.

Unfortunately it is impossible to conform strictly to that definition in monthly accounting, for some smelters, especially those in centres like New York,

Intelligent Use of Them

By WALTER RENTON INGALLS

produce copper from junk as well as from ore, and although a segregation is made, a complete separation is impossible until analysis is made at the end of the year. The blister copper statistics are the best measure of world's new production, month by month, for upon this basis there is no possibility of duplication; but owing to the inability to make a complete segregation of the copper from junk, they tend to run a little too high in the monthly computation.

As a side note it may be here mentioned that there is a certain production of new copper that goes into bluestone (copper sulphate), which is a consumers' commodity, and by-passes the metallic form. Although this amounts to a substantial tonnage, it is small in comparison with the grand total.

From the smelters the crude copper passes to the refiners, who also get a great deal of clean junk and of mill scrap that has only to be put through the electrolytic process, or perhaps only to be remelted. For this reason the statistics of refinery production are always in excess of those of smeltery production. Also there is a difference in timing. It is commonly reckoned that blister copper leaving the smeltery does not emerge the refinery until three months
This is probably correct in respect of blister copper itself, but a considerable proportion of the copper that is counted statistically as blister, or more correctly, as new, copper, is already in finished form, e. g., Lake copper, electrolytic direct from ore, Bessemer, and other fire refined, wherefore the response of refinery production to changes in blister production ought to be inside of three

From the refinery the copper passes in the forms of wirebars, cakes, ingots, billets, cathodes, and a few minor forms to the mills and foundries. Owing to these being the first buyers they are commonly characterized as the consumers, but of course they are not consumers at all, but only manufacturers. deed, important distinctions among them are to be made. The primary manufacturers roll, draw, and extrude rods, wire, plate and sheet, tube, &c., both of cop-per and brass. These may go to secondary manufacturers who make other things, and their things may go to tertiary manufacturers or even quaternary, eventually there is a discharge into final consumption as automobiles, ammunition, locomotives, electrical machinery, electrical transmission lines, buildings, &c. It is from that final consumption that the junk eventually comes

It is between the refineries and real consumption that we have a great statistical gap that is surveyed only partially in respect of the United States and not at all for elsewhere. In general we are able to gauge consumption, country by country, only by figuring net imports, plus domestic production, plus or minus changes of stocks in so far as data exist. In default of better information we call this consumption, but more accurately it is supply available for consumption. Over a series of years, three at least, this may average into substantial harmony with true consumption; for a single year it may be quite out of joint; for a single month it may

be fantastic, even when changes in stocks are taken into account. This is not due to errors in the statistics but rather to natural irregularities in deliveries which may vary from the rate of manufacture, which in turn may vary from the rate of consumption.

For the United States we have also had specific data of shipments from refineries to domestic manufacturers. respect of these reports there is nothing computational, nothing deductive, or inferential. Yet, economically these data may be dangerous. The refiner ships to e manufacturer a certain tonnage of cakes. The manufacturer rolls them to sheet and after trimming off a certain portion of bad edges, making a first production of mill scrap, ships the sheet to another manufacturer who may cut out circles, and make more mill scrap, and so on. The mill scrap may go back to the refiner, who remelts it and ships it out again as cakes. And so round and I have tried to simplify the idea of this cycle, which in reality is far more complicated than here stated. respect of it we have scarcely any statistical data.

The American Bureau of Metal Statistics has gone further in the effort to account for real consumption in the United States. It has been inspired by the theory that if production could be known on the one hand and consumption on the

other, what happens in between is relatively unimportant in the long run. In other words, if we can read the first and the last pages of a three-page story, a missing middle page can be inferred nearly enough. So it goes directly to the consumers—the manufacturers of automobiles and of electrical machinery. the stringers of wire, &c .- and asks them how much they have used. In this way a series of figures for the last twelve years has been secured. No such attempt has ever been made in any other country. This accounting is obviously regardless of the source of the copper. The automobile manufacturer who buys tubing to put into his radiators neither knows nor cares whether it came directly from the mines or from junk.

Manifestly an accounting in this way cannot be complete. The A. B. M. S. thinks that its aggregate has consistently a minus error, probably between 1 per cent and 5 per cent. This then gives us a comparison with production, which on the basis of annual figures is reckoned inside of an error of 2 per cent. I must here make the additional explanation that in the United States we manufacture a considerable quantity of rod, wire, sheet, &c., for export, and that this is included as a domestic consumption. There is a certain fallacy in this, as I shall subsequently point out. With this explanation and reservation the conclusions may be summarized as follows:

1. On the face of the statistics the domestic consumption of copper is supplied normally to the extent of 11 per cent to 12 per cent by the reclamation

Our 1931 Financial Summary

WALTON L. CROCKER

Over 370 offices in 37 states and jurisdictions are available for the life insurance service offered by this Company

1032

from junk. If we allow for the consumption statistics being too low, this percentage may be 15.

2. In a time of contracting consumption and liquidation of mill inventories, the satisfaction of consumption from junk plus surplus of mill scrap may rise to 25 per cent (as in 1930) subsequently returning to normal of 15 per cent.

3. The manufacture of copper in the forms of rods, sheet, tube, &c., is about 40 per cent more than the rate of consumption. This is to say that if the rate of consumption be 100,000 tons per month, the rate of manufacture will be about 140,000 tons per month. The difference goes into mill scrap. The refiner delivers, or ships, 140,000 tons, but he gets back 40,000 tons in scrap. This shows clearly how refinery shipments correlate with manufacture, not with consumption. This is theoretical, for more or less of the mill scrap is remelted in the factories where produced.

4. The fundamental statistical purpose is to compare the rate of production of new copper, i. e., the mined copper, with the rate of true consumption. In attempting to do this we can only assume that the deliveries for consumption in foreign countries is equivalent to consumption itself, assuming that the cycles of junk and scrap are internal affairs of each country that do not appear in the statistics. This is a valid assumption in that none of the great manufacturing countries of Europe—Great Britain, France and Germany—shows any important position as to net imports or exports of scrap. The United States only shows an important net exportation, and in disregarding the movements of scrap we may underestimate world's consumption by a little, while on the other hand overestimating world's production on the basis of blister copper.

5. Statistical exhibitions that appear to be plain may require further analysis. Thus the shipments of refined copper shapes to Canada in 1931 were approximately as large as in 1930, although we know that the Dominion suffered substantially the same contraction in industrial activity as the United States. The statistical paradox is explained by the knowledge that Canada has been in-

stituting its own copper manufacturing and that consequently its importation of American rod, sheet, &c., has been diminishing as shown by the statistics under that head, which do not enter into the conventional computation of consumption.

6. The consumption of new copper in the United States in 1931 was about 500,000 tons, including what we manufactured for export. The production of our mines was about 525,000 tons. We were still, therefore, a copper exporting country, as for many years we have been. If we take into account our exports of copper manufactures (rod, sheet, &c.) and our exports of scrap, our exportable surplus is larger than appears on the basis of bar copper alone.

7. The great volume of copper that appears in American import statistics is largely crude copper that is brought hither for refining; and the great volume of exports is the same copper after it has been refined. In considering these statistics consideration must be given to shifts in the business. Until a few years ago most of the electrolytic refining was done in the United States. In recent

years there has been an institution of great refineries in Germany, Belgium and France, and more recently in Canada. Consequently a great many supplies of crude copper that used to come to the United States no longer do so.

One of the reasons for electrolytic refining is to separate the gold and silver that enter into crude copper. There is an increasing supply of copper from Chile and Rhodesia that does not contain the precious metals, and which can be sufficiently refined in furnaces on the spot. There is also an increasing supply of copper from Chile and Katanga that is electrolytically refined directly from the ore.

Finally, a great deal of copper junk that used to be smelted by secondary concerns, and was not statistically accounted, now passes through the great primary refineries, which have improved the methods for dealing with such material, and so gets into the statistics instead of escaping them.

stead of escaping them.

All of these changes have to be considered in any study of the copper statistics.

Europe From An American Point of View

Continued from Page 508

and splendid King Albert of Belgium, coming from his capital, was present.

The French Government has reestablished its embargo on importation of fresh fruit.

The number of unemployed in France receiving relief on March 4 was 293,000, a slight increase since the last previous report.

GERMANY

In the Presidential election of March 13 the total of votes cast was 37,-660,377, whereof Marshal von Hindenburg received 18,661,736, Adolf Hitler 11,328,571, Ernst Thaelmann (Communist) 4,971,079, and Theodor Duesterberg (joint candidate of the Nationalists and the Steel Helmet League) 2,517,676. The Communist vote was considerably less than had been expected.

less than had been expected.
On March 8 the Reichsbank's rate was lowered from 7 to 6 per cent, and collateral rate from 8 to 7 per cent.

The mark stood at 23.80 on the New York market at closing on March 14, as against 23.76 on March 7.

The Reichsbank's statement as of March 7 showed the following: Gold coin and bullion decreased 48,489,000 marks; reserve in foreign currencies in circulation decreased 89,420,000 marks; ratio of reserve held against outstanding notes 24.8 per cent, as against 25.2 per cent on Feb. 29; total gold holdings 880,006,000 marks, as against 928,495,000 on Feb. 29; total note circulation 4,178,896,000 marks, as against 4,268,316,000 on Feb. 29.

The Reichsbank (notwithstanding the urgent representations of the engineering trade) has refused to extend its credit for exports to Soviet Russia beyond the \$250,000,000 limit.

The total of unemployment on Feb. 29 was 6,128,000, an increase of 1,000 in two weeks.

in two weeks.

No wonder German export falls off.
We hear that in the fourth quarter of
1931 German export prices dropped an
average of only 5 per cent, in comparison with the third quarter, whereas
British prices fell at least 25 per cent.
Obstacles to German export increase, by
way of duties, quotas or restrictions on
payments.

The new budget of the State of Prussia calls for expenditure of 1,906,000,000

marks, as against 2,241,000,000 for the current fiscal year.

RUSSIA

THE second Five-Year Plan is to be ready on Feb. 1, 1933. This much is said to be definately determined: that it will contemplate complete collectivization of agriculture and drastic construction of industry. The following points are also said to have been fixed:

The capital to be invested toward realization of the plan will total 150,000,000 rubles, as against 66,000,000,000 contemplated for the first Five-Year Plan (but bear in mind in this connection the devaluation of the ruble in the past two years).

Electric power consumption is to be sextupled. In the last year of the plan 10,000,000,000 kilowatts of electricity are to be produced—exceeding present production in the United States.

We are told that Russian production of coal, iron, steel and electric power in 1931 averaged about 10 per cent of United States production in those categories.

At the end of the second five-year period the Soviet Union shall be producing 170,000 tractors annually.

THE LEAGUE ASSEMBLY

N March 11 the League Assembly passed a resolution which recapitulated the successive steps taken by the League Council and by itself with reference to the Sino-Japanese

imbroglio, reaffirmed the principles and sanctions which had guided those steps, d provided for establishment of a committee of nineteen to act as its executive agent (in place of the Council) with rect to the Sino-Japanese business, outlining, moreover, the main activities expected of it in effecting a standing committee with special instructions to act for the Assembly during its adjournment. soon to be taken. The committee has been established and is composed of the twelve members of the League Council "other than the parties to the dispute," Paul Hymans, the president of the Assembly, and representatives of six governments not represented on the Council elected by secret ballot. The six States so honored by a representative each are Switzerland, Czechoslovakia, Colombia, Portugal, Hungary and Sweden.

SOUTHERN CALIFORNIA EDISON COMPANY, Ltd.

ANNUAL REPORT FOR THE YEAR 1931

JOHN B. MILLER. Chairman, says in part:

JOHN B. MILLER, Chairman, says in part:

The Company has successfully met the test of 1931, one of the most exacting years in the three and one-half decades of its history, closing the year in a strong and secure position. Confronted with an unusual number of major problems, some of which were independent of the current general business conditions, the Company maintained its excellent earnings record and added substantially to the scope and extent of its service, and further strengthened the foundation for its future growth. Particular problems which had to be met during the year included the severe contraction in industrial and commercial activities of large customers, subnormal water conditions, lower rate schedules voluntarily adopted by the Company, and surplus personnel in the Company's employ resulting from the completion of its large and extended construction program.

The contraction in industrial and commercial activi-

adopted by the Company, and surplus personnel in the Company's employ resulting from the completion of its large and extended construction program.

The contraction in industrial and commercial activities severely affected a normal development of the new business program, and temporarily deferred full realization of a large volume of industrial and commercial load already connected to the lines. This connected business nevertheless forms a solid foundation for future growth as improvement in general business conditions takes place.

The winter of 1930-1931 was one of extremely low water storage conditions throughout the State. Consequently the operation of hydro-electric plants was seriously curtailed and the greater part of the load was carried by steam plants, entailing unusually large expense for fuel.

In line with the Company's policy of making voluntary rate reductions, another reduction in rates was made during the year, benefiting particularly certain industrial and agricultural consumers. This was the tenth voluntary reduction made by the Company in its electric rates during the past eight years. A further adverse influence on earnings for the year was the reflection in 1931 operations of the full effect of rate reductions made in 1930.

The completion of the large construction program, which has been in progress for the past several years, presented a perplexing problem of surplus personnel which was greatly intensified by the existing general unemployment situation. In order to furnish employment to the largest number possible of those on the payroll, the five-day working week was adopted for the entire organization, and every other adjustment was made which would mitigate the hardship upon those whose particular job had been completed.

Gross revenues for the year amounting to \$40,-715,934 indicate a satisfactory earning condition.

Gross revenues for the year amounting to \$40,-715,934 indicate a satisfactory earning condition. Notwithstanding the foregoing unfavorable operating conditions, net earnings of \$26,999,819 were equivalent to 3.9 times annual interest requirements. After setting aside depreciation and the payment of regular cash dividends on all classes of Preferred stocks, the balance available for Common stock was equal to \$2.53 per share on the average number of shares (3,099,574) outstanding during the year. Regular dividends of \$2.00 per share were paid on the Common stock.

INCOME ACCOUNT—SOUTHERN CALIFORNIA EDISON COMPANY, LTD. (Company only). Year 1931 compared with 1930.

Financing operations in 1931 included the retirement of the balance of the outstanding Pacific Light and Power Corporation 1st & Ref. Mtge. 5% S. F. Gold Bonds, due September 1, 1951, amounting to \$5,659,000, called for redemption on March 1, 1931; and the entire issue of \$10,000,000 Southern California Edison Company Gen. & Ref. Mtge. 25-year 5% Gold Bonds, Series 1919, due February 1, 1944, called for redemption on August 1, 1931. Sinking Fund

operations and maturities retired an additional \$193,000 of underlying bonds, making a total of \$15,-852,000 retired during the year. These retirements were effected in part by temporary financing in the form of short term notes, which it is expected will be taken up in 1932 through the sale of bonds. During the year there were sold over-the-counter \$3,747,000 of Refunding Mortgage Gold Bonds, Series of 55, due 1954, and Series of 4½s, due 1955, proceeds of which were used for capital expenditures. At December 31, 1931, total outstanding funded debt amounted to \$128,671,000, of which \$109,900,000 represents bonds issued under the Refunding Mortgage and \$18,771,000 underlying bonds. Total assets increased \$8,225,610 over the preceding year, and at the close of 1931 the book value of all the Company's properties, including working capital, was approximately two and three-fourths times the outstanding bonds.

Early in the year an offering of Common stock

fourths times the outstanding bonds.

Early in the year an offering of Common stockwas made to Original Preferred and Common stockholders in the ratio of one new share of Common at par for each ten shares held. Subscriptions were received aggregating \$7.702,050, or 98.96% of the offering. In addition 101,126 shares of Series "C" 5½% Preferred stock were sold through the Company's Investment Department, principally to consumers. The total number of stockholders at December 31, 1931, was 123,797, an increase of 1,752 during the year. The average number of shares per stockholder was 64.8 shares, compared with 62.4 shares at the close of 1930.

Capital expenditures during the year amounted to

holder was 64.8 shares, compared with 62.4 shares at the close of 1930.

Capital expenditures during the year amounted to \$9,261,747.40. In addition to this the Company expended \$3,060,000 as its portion of cost of a natural gas fuel line from Kettleman Hills to the Long Beach steam generating works, built by Southern Fuel Company, an affiliated corporation in which the Company holds joint interest with local gas companies. This pipe line was completed and placed in operation in November, 1931. For the year 1932 the Company has a construction budget of \$11,398,559.

The output of generating plants during the year totaled 3,061,836,977 kw. hrs., as compared with 3,168,973,397 kw. hrs. in 1930. Due to subnormal water conditions materially reducing the proportion of the total load carried by water power plants, in excess of 53% of the total output for the year was generated at steam plants. The winter of 1931-1932 is recording especially heavy precipitation, which will assure a supply of water in 1932 sufficient to fill the Company's storage reservoirs to capacity, permitting more extensive operation of hydro-electric plants during 1932 than has been possible in recent years. The load to be carried by steam plants will be correspondingly reduced, with a substantial economy in fuel expense. At the close of the year 1931 there were 481,824 meters on the Company's system, as compared with 467,098 in 1930, while the connected load was 2,520,226 horsepower, as compared with 2,448,074.

AUDITORS' CERTIFICATE.

To Southern California Edison Company, Ltd.:

We have examined the accounts of SOUTHERN CALIFORNIA EDISON COMPANY, LTD. (a California corporation), and subsidiary companies, for the year ended December 31, 1931, and certify that, in our opinion, the accompanying consolidated balance sheet and consolidated income and surplus accounts fairly presents the financial position of the companies to December 31, 1931, and the results of their operations for the year ended that date.

ARTHUR ANDERSEN & CO. Los Angeles, California, February 6, 1932.

Elements in the Position of the Tire Industry

the stabilization of the automobile industry, although two years ago no motor executive would admit this in public nor plan for it in private. The lessons of the past two

years have been driven home and many prominent automobile manufacturers have lately confessed that our domestic passenger car market was satisfied several years ago, and that in consequence replacement has become most important. The passenger cars and motor trucks which are running on our streets and roads comprise the largest market for tires. If the number of registered vehicles has become relatively stable, to the extent that normal growth has declined to small or even negative annual additions, can the automobile tire industry escape stabilization?

In the early years of the automobile industry the number of tires manufactured was directly proportional to regisns; after the war, when better tires were being made, the number of annual replacements per car began to decline, and registrations increased faster than tire production, and about the time that palloon tire was perfected the growth of tire sales became once more proporto the use of motor vehicles because registrations were not increasing rapidly. During all the years from 1917 to 1928 the upward trend of pneumatic tire production was geometric, or ounding, like a fund at compound interest, and at the rate of about 11 per cent annually. Subsequently, in 1929, tire production declined for the first time in en years. An industry which was unable to advance in that year has small prospect of going ahead in periods of ess activity. Briefly, the production of eumatic tires has reached a phase when it may be expected to fluctuate from year to year according to whether

During the period 1916 to 1923 the mileage of tires was increased by better construction from about 3,500 miles to 000 miles. The average balloon tire i in use has a mileage life at least twice years ago. Improvements in tire construction have been frequent, and the cause of a progressive decline in per car renewal tire sales. How important the replacement tire market is to the industry may be gathered from its relation to the sales of all tires. Although the spread between them varied up and down n year to year, replacement tire sale tended to account for 70 per cent of all ction (Figure 1) and tires for original equipment, exports, trade inven-., 30 per cent.

The ultimate effect of improving the quality of tires was not at first apparent because of the introduction of low-pressure balloon tires, in 1924, reanimated renewal sales. Not only were old, wornout tires replaced with the new balloon tires, but the improved riding qualities and larger mileage guarantees caused owners to replace high-pressure cord tires before their mileage was exhausted. The substitution of balloon tires for

By WILLIAM WREN HAY

high-pressure cord tires was not a new thing for the industry because there had been an earlier switch from fabric clincher tires to cord tires (Figure 2). The earlier change was under way by 1917, but it was mitigated by the continued use of clincher tires on Ford's Model T car, which still comprised the majority of passenger cars in use at the time of the appearance of balloon tires.

but it is too early to expect any motorcar maker to adopt them for original equipment. Although this new substitution is in embryo, its most significant feature is the possibility of the practical elimination of wheels by the use of dropcentre rims which bolt directly to the axle, suppressing the wheel centre. Wheel-makers have been through other swings of popular fancy, too, for about

Cord tires did not reach a dominant position much before balloon tires were adopted, but within four years production of the newer tire exceeded that of its forerunner.

Extremely low-pressure tires have recently been placed on the market by several tire makers—"doughnut" tires they have been called. Trade reports are to the effect that the new tires are finding a good reception as renewals.

the time that balloon tires had become popular wire wheeels came into universal use and disk wheels passed into oblivion.

The general adoption of each new type of tire was accompanied by a prolonged drop in tire prices (Figure 3). Mileage guarantees became the fetish of manufacturers and ruinous price slashing was the weapon each turned against the others. From 1920 to 1924 tire prices were halved. Since 1926 they have

again been cut in two. The influence on the price of tires of the price of crude er, the most important raw material, has been exaggerated and has confused observers. The high price for crude rubber in 1925, a result of the British restrictions, actually had only little effect on tire prices, for although the price of the raw material mounted, price of tires remained relatively Just after the failure of the British restriction, crude rubber prices averaged as high as they were before, but in the meantime the price of tires had been lowered one-half. More important changes have taken place since then, because the largest market for crude rubber has been stabilizing. For many years the dollar sales of tires have remained pretty constantly about 70 per cent of the total value of manufactured rubber articles in this country, while the tire industry consumes 85 per cent of all crude rubber imported into this country, or over one-half of all crude rubber that is marketed.

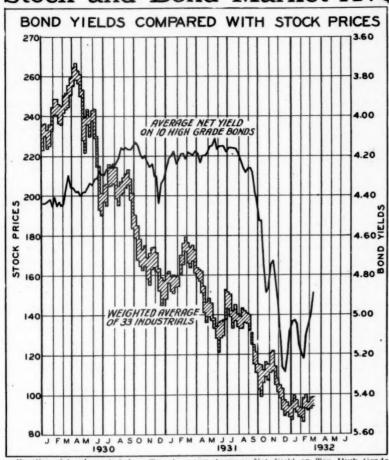

It is debatable which had the more effect on tire sales-quality or price. The sales stimulants of low prices and more mileage became a two-edged sword, because while prices were lowered the longer-lived tire constantly reduced the rate of renewals necessary to keep registered vehicles on the highways. Furthermore, the relatively rapid increase in 'miles per dollar" forced manufacturers to make a great many more tires in order to get the same sales volume. Tire makers must now dispose of twice as many tires as they sold in 1926 for the same amount of money, but because all the large makers had to do the same thing aggregate capacity expanded at a rate nearly twice as fast as the available market did. In their efforts to obtain the volume necessary to keep their plants in continuous operation, the large manufacturers competed more ruthlessly than ever for original equipment sales, neglecting the essential fact that replacement sales comprise their largest market. Then, too, as production continued to mount, all the savings from the larger volume were passed on to buyers, and profitless prosperity was inevitable.

The advent of the balloon tire also assisted in the elimination of more than half the number of tire makers. At the close of 1923, the year before the new tire was adopted, nearly 200 tire makers were in business; seven years later only one-third of them had survived. The importance of the largest companies was enhanced by this, because in 1927 the "big four" of the rubber industry accounted for 57 per cent of total dollar sales of manufactured rubber articles, in 1929 they accounted for 66 per cent and in 1930 for 73 per cent. This did not help the tire industry, because the largest producers have always been the most flagrant price slashers.

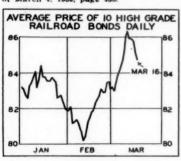

Unquestionably there is now too much capacity in the tire industry. In view of the highly seasonal character of the buying, it did not become excessive before 1929, and its potential influence was mitigated by the elimination of weak producers. There are no authentic figures for productive capacity in this industry, although it has been stated to be well ever 100,000,000 tires a year. Akron factories alone, by running to capacity, can produce all the pneumatic tires that could be sold. One of the largest producers has no plant in Akron. Excess capacity that is not quickly absorbed

Outstanding Features in the Commodities

HE Annalist Weekly Index of Wholesale Commodity Prices dropped back almost to its low of a fortnight past and stood at 91.4 on March 15, compared with 91.8 last week, 91.3 two weeks ago and 109.3

at the same time last year. Lower prices for the grains, live stock, sugar, bituminous coal and copper were chiefly responsible for the decline; the meats, dairy products and gasoline were higher, though not enough to offset the losses.

The world movement of prices continues generally to parallel the decline in this country, although the present decline is rather less severe elsewhere. Of the countries shown below, for which wholesale price indices are available for January, all show declines both for the month and the year, except France, which reports a small advance over December. Germany is the only one, however, which shows a loss for the month at all comparable to our own, hers amounting to 3.6 per cent against ours of 3.7 per cent. In considering the small year's decline reported for the United Kingdom, it should be kept in mind that there was a definite advance in that country's price level following her departure from the gold standard; her index fell as low as 99.2 in September, marking a 7.2 per cent loss from the preceding January.

Indices used—U. S. A., Annalist; United Kingdom. Board of Trade; France, Statistique Generale; Germany, Federai Stakistical Office; Italy, Bachi; Japan, Bank of Japan,

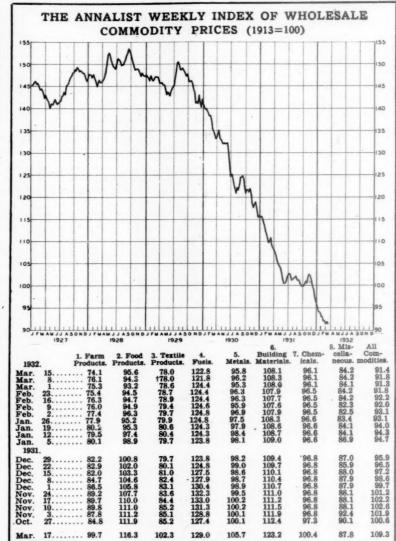

Losses were heaviest in the farm products group, of which the index dropped 2.0 points to a new low of 74.1, marking a loss of 25.7 per cent from its level of 99.7 a year ago and of 50.3 per cent from 149.2, where it stood on July 16, 1929, when its decline commenced. Milder weather in the West at the end of last week brought heavier offerings of live stock and The Annalist average for choice heavy Chicago steers continued its decline of a week ago to \$8.00 a hundred pounds, a loss of 62 cents for the week, that has carried it nearly to its low of last Summer. Hogs were a little lower, but only a part of the previous week's gain was wiped out. Cotton was lower, while last week's gains for most of the grains were much more than eliminated, with losses for all but barley that ranged from 1 cent a bushel in the case of oats to 3% cents for rye.

The food products group, on the other hand, continued its rise of a week ago to 95.6, from 94.3 last week, 93.2 a fortnight since and 116.3 at this time last year. Beef, veal and some grades of pork were higher; butter was quoted at 23½ cents a pound, compared with 22¾ last week, and has now recovered its level of eight

weeks ago. Refined sugar prices were depressed to 4.00 cents a pound from 4.15, the lowest since 1914, owing chiefly to the drop in raw prices and the uncertainty over the Cuban production situation.

Among the other commodities, Pittsburgh bituminous coal prices, used in the index, were weaker; elsewhere than at Pittsburgh, however, the cold spell has strengthened rather than weakened bituminous prices. Copper prices were unable to maintain their half-cent advance of a week ago and dropped back ¼ cent to 6 cents a pound, although reports indicate that the producers have reached an agreement for further restriction of production to 20 per cent of capacity, from the present 26½ per cent, the Belgians apparently being amenable to the proposal. Lead lost 0.1 cent a pound and tin ½ cent.

Daily crude petroleum production for the week ended March 12 was 4,750 barrels higher, advancing to a total 2,145,-600 barrels daily. Texas output rose 15,100 barrels, of which the East Texas field contributed 13,700, and California rose 4,200; the Eastern fields, however, were lower by 12,200. To counteract the effect of the continued opening of new wells in East Texas and keep its output under the allotted 325,000 barrels daily, the Texas Railroad Commission is issuing an order, effective March 16, reducing the allowable output per well to 72 barrels daily from 75. Gasoline prices were somewhat higher, The Oil, Paint and Drug Reporter's refinery average rising to 4.1875 cents a gallon for the week ended March 11 from 4.0; the crude petroleum average was unchanged at 97.6 cents a barrel.

COTTON

HE cotton market declined during the latter part of the week ended Tuesday as a result of dropping sales in the Southern spot markets and in sympathy with the decline in wheat and in stocks. The March contract closed at 6.79 cents a pound Tuesday in New York, against a nominal 6.91 a week ago; spot middling upland lost 10 points, declining to 6.95 from 7.05 a week ago. The recent cold wave throughout the country appears to have done injury to early crops, with the result that these are likely to be replaced by larger plantings of cotton than would otherwise have been made. Prospects of an acreage reduction large enough to cause a real decrease in production and stocks are growing less, with the pressure for cash crops, although the exceptionally large crop of 1931 is not likely to be repeated, in view of fertilizer and other economies and the probability of greater weevil damage because of the warm weather.

February domestic cotton consumption is estimated at 3.8 per cent above a year ago, and for the seven months from August to February at 37.6 per cent higher. Raw stocks in consuming establishments at the end of the month were fairly well in line with a year ago, with an increase of 5.4 per cent; stocks at public storage and compresses, however, were 2,197,000 bales, or 30.0 per cent higher. Active

spindles, though slightly more than in January, were 2.4 per cent less in number than in February, 1931.

World consumption of American cotton in the first half of the current season is now estimated at 6,150,000 bales by the ew York Cotton Exchange Service, its earlier estimate having been revised upward by 153,000 bales. The estimate is 210,000 bales above the recent one of 5,940,000 bales made by the International ederation of Master Cotton Spinners and is 773,000 bales, or 14.4 per cent, in excess of the similar estimate of a year ago, though still far under normal years. The world stock of American cotton at end of January is estimated at 19,-371,000 bales, compared with 14,581,000 last year and 12,043,000 two years ago.

Retail trade is disappointing, but prices have held up fairly well. February carded cotton cloth production, as reported by the Association of Cotton Textile Mer-chants, was 5 per cent higher than in

January and 15.2 per cent above February, 1931, but the restriction measures recently adopted should check any further expansion of output. February sales were 0.5 per cent over output, but 27.3 per cent less than sales in January (which had one more working day) and 24.8 per cent under February, 1931. Stocks, however, continue to drop, and for February were only 3.92 times the weekly production, against 4.38 for January and 6.02 for February, 1931.

WHEAT

BREAK in prices Monday in consequence of very heavy selling carried the futures market 3 cents wnward from the levels to which it had been confined for the past month. The March future closed Tuesday in Chicago at 54% cents a bushel, against 57% a week ago. Spot prices were proportionately lower. The recent cold spell does not appear to have done much damage, as snow cover for the Winter crop was generally adequate.

Farm wheat stocks on March 1 are estimated by the Department of Agriculture at 207,323,000 bushels, against 161,-442,000 last year, and 129,402,000 two years ago, and a five-year average for 1925-29 of 124,977,000. Included in these estimates are the amounts being held for Spring seeding, amounting to from 23,000,000 to 27,000,000 bushels in recent years. Stocks of corn on the farms on the same date are placed at 1,103,691,000 bushels, against 703,529,000 last year (due to the small 1930 crop), and a fiveyear average of 1,051,029.000.

France has again raised her foreign wheat import quota, this time to 30 per cent, from the 25 per cent quota estab-CHICAGO GRAIN FUTURE PRICES

HIDES

UIETNESS again marked the week in hides, with futures declining 60 to 70 points and spot prices steady.

The June future closed at 6.85 cents a pound bid Tuesday on the local exchange, against 7.00 bid a week ago.

Spot prices, as reported by Hide and Leather, were generally unchanged, heavy native and Texas packer steers being quoted at 61/2 cents and light native packer cows at 6 cents. New York and Chicago certificated stocks dropped 5.883 hides to 62,469.

COFFEE

QUIET coffee market was inter-rupted Tuesday by a break in prices that carried most of the futures downward as much as 20 to 25 points. The drop was due to heavier selling by European interests and the withdrawal of the support that the market has been given of late. Spot prices were not affected. The March Santos contract closed at a nominal 8.10 cents a pound Tuesday, against a nominal 8.24

HANGES in Capitalization — Plans of the Chesapeake & Ohio Railroad to issue \$28. 142,000 of 41/2 per cent gold mortgage bonds as collateral security for \$9,000,000 of short-term notes

have been approved by the Interstate Commerce Commission.

The proceeds of the issue will be used in partial reimbursement of the road for expenditures made in 1931 for various

in partial reimbursement of the road for expenditures made in 1931 for various equipment.

The issue is to be pledged at a ratio of \$125 face amount of bonds for \$100 of notes at prevailing market prices. The commission's approval was granted on condition that none of the proceeds would be used in payment or purchase of stock in another company or to pay off indebtedness to other companies without its further authorization.

The C. & O. stated in its application that it had spent \$12,900,000 during 1931 for rails, fastening and other equipment, which came due for payment during the first six months of the current year. It said it would be in a better position to obtain more favorable terms for short-term loans sought in the future "if it has authority to pledge its refunding and improvement mortgage bonds as collateral."

The Lehigh & Hudson River Railroad in an application filed with the commission seeks authority to issue \$2,078,000 of 5 per cent equipment trust gold certificates. the proceeds to be used in part

sion seeks authority to issue \$2,078,000 of 5 per cent equipment trust gold certificates, the proceeds to be used in part payment for twenty locomotives, ten of which were purchased from the American Locomotive Company and ten from the Baldwin Locomotive Works.

The Pennsylvania Railroad through curtailment of expenditures and other economies expects to have an income surplus at the end of the current year of \$15,746,000, compared with \$14,020,107 for 1931, according to figures cited in its application for a three-year loan of \$55,000,000 from the Reconstruction Finance Corporation filed with the commission on March 10.

March 10.

The application, requesting the largest loan yet to be sought from the corporation, described in detail expenditures contemplated this year in electrification of its New York to Washington lines and on improvements to facilities at intermediate reints. On the entire project to be improvements to facilities at intermediate points. On the entire project to be completed at a cost of more than \$110,000,000, 1932 expenditures were estimated at \$68,000,000. With reference to the electrification project the application stated:

electrification project the approximated:
"At the beginning of 1931 work on the New York terminal area had so progressed that it was decided that the north-south portion of the project, that is, between New York and Washington, could be completed by some time in 1933. Schedules were arranged calling for the complete electric operation of this north-south traffic, passenger and freight, between New York and Washington, by March 1 1933.

schedules were already and state of this northsouth traffic, passenger and freight, between New York and Washington, by
March 1, 1933.

"This involved the ordering, delivery,
erecting and placing in service in a little
over two years, in the territory between
New York and Potomac Yard (south of
Washington) some 230 miles, of approximately 68,000 tons of steel, 38,000 pounds
of copper, 120 large transformers, 530
circuit breakers, 176 new locomotives, alterations on 36 existing locomotives, from
86 to 114 new multiple unit car equipments dependent upon business conditions, and a large quantity of miscellaneous smaller equipment.

"The construction involved thirty new
substations or switching stations and the
extension of twelve existing stations and
the placing of some 8,000 steel poles on
concrete foundations and the stringing of
approximately 6,500 miles of wire in the
electrification of 1,082 miles of track."

In line with economies planned for
1932, the Pennsylvania forecast total
railway operating expenses for the year
of \$295,600,000, compared with \$352,865,
931 spent in 1931.

The application cited the following financial data for company operations in
1931, with corresponding estimates for
1932:

Railway oper rev....\$448,090,000 \$399,400,000
Railway oper rev....\$448,090,000 \$399,400,000
Railway oper rev....\$448,090,000 \$399,400,000

American Security News & Earnings Records

income were \$100,112,000, of which \$28,-131,000 was for interest on funded debt and \$339,000 for interest on unfunded debt. Thus the estimated net income of the Pennsylvania for 1932 was \$21,745,-000, compared with \$19,941,499 during 1931.

The amount involved in dispositions of the net income for 1932 for various purposes was estimated at \$5,999,000, leaving an income balance transferred to credit of profit and loss of \$15,746,000, compared with \$14,020,107 in 1931.

American Printing Company

American Frinting Company
Stockholders of the American Printing
Company have voted to change 30,000 no
par common shares into 30,000 no par
preferred shares, and to reduce the remaining 250,000 no par common shares to
50,000 shares. These changes do not involve a reduction in the company's capital

Blackstone Valley Gas and Electric Company

A new issue of \$2,000,000 Blackstone Valley Gas and Electric Company mortgage and collateral trust 5 per cent bonds, Series B, due on April 1, 1952, has been offered at a price of 91%, to yield 5.69 per cent. The issue has been marketed by Estabrook & Co., and Stone & Webster and Blodget, Inc. The company, which is a constituent company of Eastern Utilities Associates, reports net income for the twelve months ended on Jan. 31 as \$2,645,714, or more than four and one-half times the annual interest requirement of \$578,265 on all bonds outstanding, including this issue. The company will apply part of the proceeds of this financing to the retirement of \$1,400,000 Pawtucket Gas Company of New Jersey 4 per cent bonds which will mature on May 1, and use the balance for other corporate purposes.

Cosden Oil Company

Cosden Oil Company

Cosden Oil Company
A plan for reorganization of the Cosden Oil Company, in receivership since November, 1930, has been announced by a committee headed by J. S. Cosden and comprising also James Cameron, A. J. Duncan, H. Brooks Gutelius, Charles D. Hartman Jr., Charles S. Hirsch, Richard L. Morris and Harold E. Talbott Jr.
The committee urges the deposit of assignments of creditors and preferred and common stock with the Bankers Trust Company, depositary, or the Fort Worth National Bank, subdepositary, on or before April 15, to assure the early resumption of business by the reorganized company.

fore April 15, to assure the early resumption of business by the reorganized company.

Under the plan holders of secured obligations, debts and claims will receive up to the principal amount thereof and interest to Nov. 9, 1930, first mortgage 6 per cent serial bonds of the readjusted company, maturing in even quarters in two, three, four and five years, respectively. Holders of unsecured obligations, debts and claims will receive general lien five-year 6 per cent bonds to the principal amount of their claims, with interest to Nov. 9, 1930.

Holders of preferred stock will receive share for share \$100 par value 7 per cent preferred stock of the readjusted company, non-cumulative for two years and cumulative thereafter at the rate of \$7 annually. The depositors of preferred stock are required to waive accumulated dividends on the existing preferred stock. Holders of common stock will receive share for share in no par common stock.

Federal Water Service Corporation

Federal Water Service Corporation
The Central Hanover Bank and Trust
Company has agreed to carry the \$4,400,000 bank loan, now on a demand basis,
for not less than three years for the Federal Water Service Corporation, under a
contract signed between the bank and the
public utility system. Other than this
the total loans of the Federal system are
less than \$300,000.

The agreement provides that through

less than \$300,000.

The agreement provides that through an exchange of securities with the Central Hanover and with the Chase National Bank the reorganized Federal Water Service Company is to acquire approximately \$4,500,000 of debentures and notes of the Southern Natural Gas Corporation. A new committee for the protection of the debentures has been formed

with William S. Gray, vice president of Central Hanover, as chairman.
Other members are Edward L. Love, vice president of the Chase National Bank; Charles B. Stuart of Halsey, Stuart & Co.; Richard C. Hunt and Christopher T. Chenery, president of the Utility Operators Company, which will control Federal Water Service. This exchange makes Federal the largest holder of Southern Natural Gas debentures. First mortgage bonds of the Southern Natural Gas Corporation are not in default.

This plan places the Federal Water Service in a position to be conducted by the men and women who have been operating it for the last five years.

The officers of the Utility Operators Company are:

Company are: Company are:
President—C. T. CHENERY.
Vice President—A. W. CUDDEBACK.
Vice President—RUSSELL H. NEILSON.
Secretary—FREDERIC T. TANSILL.
Treasurer—WALTER A. CULIN
Assistant Secretary—ERYSON PAINE.
Assistant Treasurer—HENRY S. AUSTIN.
Controller—E. F. C. PARKER.

Columbia Broadcasting System

Columbia Broadcasting System
The 50 per cent stock interest in the
Columbia Broadcasting System heretofore owned by the Paramount-Publix Corporation has been acquired by a group
headed by William S. Paley, president of
the radio chain, and including investment
banking interests. Mr. Paley and his
associates now dominate the company.
The Paramount-Publix Corporation received \$5,200,000 for its half-interest in
the Columbia Broadcasting System and
has purchased all its own common stock

ceived \$5,200,000 for its half-interest in the Columbia Broadcasting System and has purchased all its own common stock which it was obligated to reacquire under the agreement under which it originally obtained a half-interest in the broadcasting company. This obligation involved a payment of \$4,036,000, indicating that Paramount-Publix had obtained a net amount of \$1,164,000 in cash under the transaction. The company announced that it had no further obligation under this or any other transaction to repurchase any more of its stock.

The investment banking house of Brown Brothers, Harriman & Co., which has placed part of the Columbia stock with interests associated with it; the Lehman Corporation, Field, Glore & Co. and Herbert Bayard Swope, former executive editor of The New York World, are members of the banking syndicate which participated with Mr. Paley in the acquisition of the Columbia stock. On behalf of the bankers it was said that their participation was for private investment, and that no public offering was contemplated.

The directors who represented the Par-

The directors who represented the Paramount interests on the board of the Co-

amount interests on the board of the Columbia Broadcasting System have resigned and their places will be filled at the next meeting of Columbia's stockholders, to be held within a month. Mr. Swope and representatives of the bankers will be nominated at the meeting.

Mr. Paley, in association with a small group, bought the Columbia Broadcasting System on Sept. 25, 1928, when it had only sixteen station outlets. When they sold a half-interest to the Paramount company in June, 1929, the chain had made great strides. The network now has ninety-one associated stations spreading its programs from coast to coast and to many foreign countries.

Philip Morris Consolidated, Inc.

Philip Morris Consolidated, Inc.

Stockholders of Philip Morris Consolidated, Inc., will vote on April 5 on a plan for reducing the company's authorized capital and cutting the number of common shares in half. There has been a widespread movement among corporations in recent months to reduce the number of shares outstanding by offering a smaller number of new shares in exchange for the present stock.

The Philip Morris plan calls for reducing the present authorized 146,500 shares of \$25 par 7 per cent Class A stock to 125,000 authorized shares, and cutting the present 1,200,000 authorized shares of no par common stock to 800,000 shares of \$10 par stock. The shareholders will be asked to exchange the present common stock for the new \$10 par common on the basis of two no par shares for one share of new common. At the end of 1931 there were cuttarding 50,000 share of new common. At the end of 1931 there were outstanding 50,000

shares of Class A stock and 965,192 shares of no par common.

These changes, it was said, would save the company about 2 cents a share on the common stock in franchise taxes and result in lower stock transfer taxes for those buying or selling the shares. Both classes of Philip Morris Consolidated stock are traded on the New York Curb Exchange.

Syracuse Lighting Company

Syracuse Lighting Company
New public utility financing totaling
\$7,000,000, of which \$5,000,000 is for the
Syracuse Lighting Company, Inc., and
\$2,000,000 for the Utica Gas and Electric
Company, has been done through a syndicate comprising J. P. Morgan & Co.,
Bonbright & Co., Inc., and Schoellkopf,
Hutton & Pomeroy.

The Syracuse Lighting issue consists
of first and refunding mortgage 5 per
cent bonds, Series B, due on Jan. 1, 1957,
callable as a whole but not in part on
sixty days' notice on any interest date
to Jan. 1, 1955, at 105, and thereafter at
par. The issue is priced at 95, to yield
more than 5.35 per cent. The company
will use the proceeds toward repaying
\$8,944,000 of short-term indebtedness to
companies in the Niagara Hudson System, incurred chiefly for additions and
betterments.

Completion of the financing will make

tem, incurred chiefly for additions and betterments.

Completion of the financing will make the funded debt of the company \$16,527,500. The bankers report its net income for 1931 as \$1,951,508, compared with \$1,989,863 for 1930, after provisions for retirements and interest.

The Utica Gas and Electric financing consists of general mortgage 5 per cent bonds, Series B, due Jan. 1, 1952, callable as a whole but not in part on forty-five days' notice on any interest date to Jan. 1, 1950, at 105, and thereafter at par. They are priced at 93, to yield more than 5.55 per cent. The proceeds will go toward settling \$2,500,000 of short-term indebtedness to companies in the Niagara Hudson System. The company will have then \$17,279,000 of bonded debt in the hands of the public. Net income in 1931, after interest and other income deductions, amounted to \$1,181,089, compared with \$1,254,346 in the previous year.

Tri-Utilities System

Tri-Utilities System

Abandonment of the plan to reorganize the Tri-Utilities system under the agreement dated Sept. 1, 1931, has been announced by the reorganization committee comprising Richard C. Hunt, William Buchshaum and Medley G. B. Whelpley. It was stated that it had proved impossible to consummate the plan "because of the continued financial depression, further decreases in earnings, insufficient deposits and sales of collateral in enforcement of debts."

The committee said that in view of these facts the holding together of the companies heretofore included in the Tri-Utilities system had become impossible, and that the assets of the Tri-Utilities Corporation which consist chiefly of collateral still held for its indebtedness could not be expected to realize any substantial percentage of the sums due its unsecured creditors.

Holders of certificates of deposit issued under the plan and agreement are asked to withdraw their securities deposited with the committee. No payment will be required from the holders of these certificates to meet compensation or expenses of the committee.

The Federal Water Service Corporation, the Power, Gas and Water Securities Corporation and the Oklahoma Natural Gas Corporation, now in receivership, would be reorganized by the holders of the corporation's debentures. A committee has been formed to protect the interests of these 6 per cent debenture holders, with C. E. Sigler, 70 Broadway, as secretary.

A protective committee for holders of Peoples Light and Power Corporation 5 per cent convertible debentures and 5 per cent notes has been formed, with L. S. Kershner, 48 Wall Street, secretary. The Tri-Utilities committee also says that it is advised that a separate plan for the reorganization of the American Natural Gas Corporation is being considered.

It was said that if holders of securities of the various companies of the Tri-Utilities contents who have devented.

sidered.

It was said that if holders of securities of the various companies of the Tri-Utilities system who have deposited their holdings with the committee should wish to transfer their deposited securities to the protective committees for the

individual companies they might do so through the Tri-Utilities committee on written notifications.

United Founders Corporation

United Founders Corporation

Stockholders of the United Founders
Corporation at their annual meeting in
Baltimore approved the recommendation
of the Board of Directors to reduce the
capital of the corporation. The common
stock was reduced from \$152,161,365.34
to \$45,054,240 and the Class A stock was
reduced from \$1,000,000 to \$250,000,
without in either case changing the
number of shares outstanding. The total
amount of the reduction, aggregating
\$107,857,125.34 was allocated to surplus.
Louis H. Seagrave, John H. Goss and
Royal E. T. Riggs were reelected directors of the corporation, and John M. Lee
was also elected a director.

EARNINGS

VITHOUT making any positive prediction as to the probable course of business in the future, the United States Steel Corporation, in the United States Steel Corporation, in its report for 1931, asserts that it is "reasonable to suppose" on the basis of the average demand for steel products in the last ten years that the "requirements of this country for maintenance and current uses alone" should call for a "considerably greater tonnage than was consumed" last year. This assumption, the report says, does not take into account development and expansion possibilities.

account development and expansion possibilities.
"In 1931," the report continues, "the production of raw steel in the United States declined to about 26,000,000 tons, a reduction of 15,000,000 tons as compared with the year before and 30,000,000 tons less than were produced in 1929. The production in 1931 was but 46 per cent of the 1929 output. The average annual production during the ten years, 1922 to 1931 inclusive, was 43,000,000 tons."

1922 to 1931 inclusive, was 43,000,000 tons."

The Steel Corporation itself produced 10,082,398 tons of steel ingots in 1931, against 16,726,472 tons in the preceding year. Rolled and finished steel products in 1931 amounted to 7,196,017 tons, compared with 11,609,265 tons in 1930. Pigiron output last year was 6,928,630 tons, against 12,579,143.

Total net earnings of the Steel Corporation in 1931 were \$46,483,999, compared with \$157,710,231 in 1930, while there was a deficit of \$49,165,485 after the payment of all dividends in 1931, against a surplus of \$18,836,097 after all dividends in 1930. The 1930 earnings were equivalent, after all deductions and preferred dividends, to \$9.12 a share on common stock.

preferred dividends, to \$9.12 a share on common stock.

The corporation did a gross business last year of \$729,377,467, compared with \$1,180,934,971 in 1930. These figures represent the value of the commercial transactions conducted by the several subsidiary companies and include sales made among the subsidiaries, as well as the gross receipts of the transportation companies for services rendered both to the subsidiaries and the public.

In the table below the gross sales and earnings are classified by operating groups. Gross sales of products are calculated on the basis of f. o. b. mill values. Gross revenues of transportation companies include earnings and receipts both from intersubsidiary company business and business with interests outside of the Steel Corporation organization. Gross sales by manufacturing.

Discussing the poor results of operations in 1931, J. P. Morgan, chairman, and James A. Farrell, president, said that the iron and steel industry, "in common with other industries, suffered from the extreme recession in general business activities which prevailed in the United States and in general throughout the world."

"The subsidiary companies of the

"The subsidiary companies of the corporation," the report continues, "operated during the first quarter of the

American Security News & Earnings Records

year at 50 per cent of their capacity, but thereafter there was a steady decline month to month, reaching in December the extreme low figure of 24 per cent. The average for the year was 38 per cent, compared with an average of 65.6 per cent in 1930.

of 65.6 per cent in 1930.

"This low volume of operation, involving steadily increased cost of production, together with decreasing prices obtained, averaging about 8 per cent less than in 1930 for the domestic and 4 per cent less in case of export steel sales, together with generally similar decreases in output and prices received for cement, resulted in the very unsatisfactory earnings returns for the year shown by the income account.

"The reduced volume of operations in 1931 necessarily imposed an increased

burden on the industry through the required outlay for overhead charges for maintenance of organization, supervision and taxes. Realizing early in the year the indications were for a much-reduced business, systematic and far-reaching plans were inaugurated for curtailing overhead expenses in all practical directions. This program was energetically overhead expenses in all practical directions. This program was energetically prosecuted, resulting in economies running into large totals. These economies, however drastic, could not secure an amount of savings sufficient to offset the increased costs due to reduction of activities which was reached in 1931 as already indicated and at the same time preserve the efficiency in organization necessary to handle current business offered and anticipated future business. Accordingly, with the continued drop in

Figures showing odd cents in all of the foregoing tables have been eliminated, according to sugar the calculations.

activities, coupled with the reduced index prices for commodities and of cost of living generally, it was felt necessary to adjust salary and wage rates.

"On Aug. 15 a reduction was made in the compensation paid all salaried employes receiving over \$150 a month, and on Oct. 1 reduction was made in the rates paid salaried employes exempted in the Aug. 15 adjustment and also all wage earners, excepting in both instances such employes whose rates were covered by agreements (relatively few) and those whose rates could not be modified because of statutory conditions (railroad employes).

"The foregoing savings were substantial. However, they met but in part the impost on earnings arising from an extremely low output at reduced selling prices. Because of the unsatisfactory earnings results and no early indication of improvement, and since it was evident that a large part of the dividend on preferred stock for the year would have to be taken from surplus, and any dividend paid on common stock wholly so provided, the rate declared on common was reduced in July from 7 per cent to 4 per cent, and in January, 1932, to the rate of 2 per cent per annum.

"The average price received for the total tonnage of rolled and other finished steel products shipped netted on the domestic shipments \$4.60 less per ton than the average received per ton for an equal tonnage of similar products respectively shipped in 1930; and as to export shipments, the average price received for domestic and export tonnage combined was \$4.48 less per ton than in 1930.

"The trend of actual prices received for the total tonnage of actual prices received for domestic and export tonnage combined was \$4.48 less per ton than in 1930.

"The trend of actual prices received for old actual prices received for domestic and export tonnage combined was \$4.48 less per ton than in 1930.

"The trend of actual prices received for old steel products shipped annually since 1923 inclusive is shown by the following index results, using a flat average price for all such pr

Yea 1923	8.1	r.	В	a	.8	16	• 1											Domestic.	Export.

"The aggregate amount of inventories at the close of the year, valued at the lower of cost or market price applicable under conditions pertaining to the stocks, was \$302,599,748, compared with a valuation for inventories of \$323,052,846 at the close of the preceding year. It will be noticed that in only one class of materials is an increase over 1930 shown, namely, ores. This latter arises principally from the necessary seasonal mining and stocking of Lake Superior ores during the Summer months and the unusual reduction in quantities of such ores converted during the last four months of the year because of low operation of mills. As of Dec. 31, 1931, there was written off for shrinkage in inventory values, compared with production or acquirement cost, the sum of \$5,395,996, which was covered from previously established reserves available for this purpose.

"At the close of 1931 the balances in contingent and miscellaneous reserves totaled, as shown by the balance sheet, \$46,568,133, a reduction \$5,395,996 represents the inventory value adjustment referred to in preceding paragraphs; \$1,-570,626, an allowance for write-down in balance sheet value of marketable securities owned, and the balance payments of contingent liabilities accrued largely in previous years in excess of allowances in year from operations for account of such reserves."

The corporation spent and appropriated \$107,737,302 for maintenance, depletion,

reserves."

The corporation spent and appropriated \$107,737,302 for maintenance, depletion, depreciation and obsolescence of investment in tangible property, compared with \$154,869,091 in 1930. Taxes, State and Federal, aggregated \$33,242,707, compared with \$48,051,926. Federal income tax last year was \$80,000, against \$12,004,900.

In the property and appropriate of the state of

1004,900.

In the year the corporation reduced bonded and mortgage debt by \$2,932,816, and a balance of such debt of the corporation and subsidiaries at the end of the year was \$98,515,794.

Net expenditures on property investment account last year were \$54,476,060.

The rotation of labor reduced the number of full-time workers sharply. The average number of employes working full time during the year was 53,619,

the average number working part time was 150,055, and the total number employed averaged 203,674, which was 84 per cent of a full normal working force. The total payroll in 1931 was \$266,871,413, compared with \$391,271,366 in 1930. The average earnings of each employe were \$5.90 a day, against \$5.99 in 1930. Undivided surplus at the close of 1931 was \$421,837,191, which, added to the appropriated surplus to cover capital expenditures, brought the total earned surplus up to \$691,837,191. Cash at the end of 1931 amounted to \$75,239,562, compared with \$117,203,288 at the close of the year before, and sundry marketable securities of \$69,358,308, compared with \$71,066,206. Time and other special bank deposits on Dec. 31 last amounted to \$6,208,459, against \$9,537,429, and the corporation also had at the end of 1931 \$2,079,601 due on contract advances and from banks and others in process of reorganization or liquidation.

The compares with that of 1930 as follows:

The corporation granted 3,165 pensions in 1931, compared with 1,154 in 1930; the total amount of pensions paid was \$5,830,447 against \$4,359,445 and the average monthly pension was \$64.49 against \$55.70. The pension plan was revised, effective on May 1 of last year. The total number of registered stockholders at the end of 1931 was 223,272, against 189,990 a year before.

The consolidated balance sheet as of Dec. 31 shows total current assets of \$494,532,807, compared with \$578,373,097 at the end of 1930, and total current liabilities of \$63,881,148 at the end of 1931, compared with \$108,873,454 a year earlier.

John Hancock Mutual Life Insurance Company

Company

The outstanding feature in the directors' report made to policyholders of the John Hancock Mutual Life Insurance Company at their annual meeting was the statement that over \$87,000,000 had been paid to policyholders and their beneficiaries during 1931.

The report was made by President

American Security News & Earnings Records

Walton L. Crocker and further indicated that of the above amount paid over \$19,-500,000 was on account of dividends to policyholders in annual reduction of cost.

Of equal interest was the statement

policyholders in annual reduction of cost. Of equal interest was the statement that the new insurance paid for in 1931 was over \$624,000,000, equaling 94 per cent of the insurance paid for the previous year. The insurance in force now amounts to over \$3,000,000,000.

The report showed the amount paid Massachusetts policyholders and beneficiaries in 1931 was \$17,725,890, while insurance written and paid for in the Bay State reached \$105,360,866. The total insurance in force in the State is \$719,241,698.

The report also showed that in addi-

Bay State reached \$105,360,866. The total insurance in force in the State is \$719,241,698.

The report also showed that in addition to the dividends of \$19,500,000 paid in 1931, the company has apportioned the sum of \$20,692,930 for the payment of dividends to policyholders in 1932. This means a continuation of the general cost scale hitherto prevailing to individual policyholders.

This sum is carried by the company as a liability, along with the policy reserve required by law, computed at Massachusetts standard to be \$522,220,800, and also \$47,171,467 held in reserve covering all other equities of policyholders in the company funds.

The company also provides a new special reserve fund of \$5,000,000 for asset fluctuation and amortization, and has reserved \$3,060,050 to cover taxes and sundry liabilities.

Total assets at the end of the year amounted to \$621,278,133.

The statement shows investment of these assets in railroad, State, municipal, Federal and public utility bonds, &c., to the amount of \$155,149,898; stocks \$25,340,654, of which all but \$3,773,675 are preferred or guaranteed; farm mortgages \$122,829,474.40.

Loans to policyholders \$79,310,640.58. Other assets are real estate \$28,491,546; cash \$5,115,061.82; premiums deferred and in course of collection \$14,900,043; interest and rents due and accrued \$15,439,078.54; all other items \$165,152.99.

This makes total admitted assets, as stated above, \$621,278,133.09, which is an increase for the year of \$37,156,319.68.

Pacific Gas and Electric Corp.

Net income as well as gross revenues and total assets of the Pacific Gas and Electric Corporation continued to grow in 1931, according to the preliminary statement of the company, which shows that total assets passed \$700,000,000 for the first time. the first time.

that total assets passed \$700,000,000 for the first time.

Operations resulted in a net income of \$24,791,382 after maintenance and operating expenses, taxes, reserves, interest, discount, depreciation and other charges. This was equivalent to \$2.79 a share on 6,095,659 average number of shares outstanding during the year and to \$2.73 a share on the 6,232,156 shares outstanding on Dec. 31. For the preceding year the company reported a net income of \$19,999,927, equivalent to \$3.07 a share on the 5,759,121 average shares outstanding that year and \$2.62 on those outstanding at the end of the year.

Gross income was \$88,536,846, against

\$76,578,470 in 1930. The deduction for depreciation was \$10,865,202, against \$8,866,037, and the balance after dividends on preferred and common stock was \$4,789,949, compared with \$5,168,503. The balance sheet shows total assets of \$708,582,380, against \$684,687,476 a year before. The plant and property account increased from \$628,477,965 to \$653,837,112, indicating expenditures of \$25,359,147. Current assets, including \$14,744,441 in cash, were \$30,447,198, contrasted with \$28,947,192 a year previously. Current liabilities were reduced from \$22,590,997 to \$21,958,331.

Puget Sound Freight Lines, \$1,000 of first 548, due to April 1, 1932, at the Williamigto

News of Canadian Securities

RACTICALLY all of shipments of wheat during the past two months have passed through Canadian ports. During January 99.7 per cent of Can-ada's total overseas

wheat shipments traveled over the all-Canada route, and in February the per-centage was 99.05. This is the first time recorded in recent years that the propor-tion of the Dominion's overseas wheat inovement enjoyed by Canadian ports exinovement enjoyed by Canadian ports exceeded the 99 per cent mark, although the percentage is always at its height at this time of the year. In January 9,472,-346 bushels of Canadian wheat were exported, of which only 25,500 bushels found its way to United States ports. In February that country handled only 94,-400 bushels out of a total of 9,890,363 bushels of wheat exported by this country.

try.

The ever-increasing importance of the port of Vancouver in the handling of Canada's wheat crop is responsible to a marked degree for this increasing use of Canadian ports. In the first nine weeks of the present calendar year, 19,824,057 bushels of Canadian wheat were exported the purchase that nort, while in the crop year through that port, while in the crop year from August, 1930, to July, 1931, exports of wheat through that port amounted to 72,278,542 bushels.

The cost of living in Canada, measured by retail prices, is at its lowest point since 1916, while the retail cost of food since 1910, while the retail cost of food is today on a par with pre-war prices. Wholesale prices in Canada are today at the level of the early war period. Other government statistics issued dur-

Other government statistics issued during the past week indicate a resumption of cattle shipments to Great Britain; an increase of nearly 13 per cent in the production of leather footwear in January, as compared with the corresponding month last year; production of 3,530,525 pounds of nickel and 23,089,126 pounds of copper in Canada in 1931; and decreased holdings in cold storage plants of butter and cheese on March 1, as compared to the five-year average for that date.

Canadian Pacific Railway

Net revenue of the Canadian Pacific Railway in 1931 totaled \$13,834,472 after settling fixed charges and pension fund allowances. This, after deducting preferred dividends, was equivalent to 62 cents a share on each of the 13,400,000 shares of ordinary stock outstanding, against \$2.54 on the same number of shares in 1930.

Net earnings ware \$25,692,972

shares in 1930.

Net earnings were \$25,682,872, to which was added \$10,951,964 in special income. These figures compared with net earnings of \$38,248,658 in the previous year, to which was added \$20,042,923 in special income. Special income in 1931 included: Net revenue from investments, and available sources, \$3,191,589; interest on deposits and interest and dividends on other securities, and results of separately operated properties, \$5,648,600; ocean and coastal steamship lines, \$487,517; commercial telegraph and news departments, hotels, rentals and miscellaneous, \$1,624,238.

After paying \$16,750,000 dividends on the common stock, a debit balance of \$8,326,225 was charged to surplus, against a net addition of \$133,186 to surplus account in the previous year after paying \$33,242,907 in common dividends.

International Nickel of Canada

International Nickel of Canada

Total income of \$11,055,792 and net profit of \$5,094,497 for 1931 are shown by the International Nickel Company of Canada, Ltd., in the annual report just issued. The profit was equivalent to 22 cents a share on the outstanding common stock after allowing \$1,933,937 for preferred dividends, compared with \$11,770,060, or 67 cents a share, in 1930.

Deductions from the total income include \$1,328,206, general office expenses; \$507,277, reserved for income and franchise taxes; \$439,355, interest paid and accrued; \$3,010,475, provision for depreciation and depletion; \$675,979, retirement, insurance and other reserves.

The surplus account was \$16,757,813, against \$20,646,169 at the end of 1930, the decrease resulting from payment of preferred and common dividends in excess of earnings. Common dividends totaled \$6,560,468. The directors in February announced the dropping of the common dividends, adding that the question of their renewal would be taken uplater.

later.
Output of nickel last year was curtailed to about 31 per cent of capacity. Sales were 55,739,047 pounds, compared with 75,284,352 in 1930, a decrease of 26 per

cent.
Changes in the earned surplus account reflect completion of the capital expenses

connected with the seven-year moderniza-tion program. Capital expenditures amounted to \$4,679,435, chiefly in the Sudbury district. Plant construction at the Frood mine, under way several years, was completed. Improvements in plant equipment have resulted in lower produc-tion costs despite curtailed operations. "It is now evident," says the report, that the change from blast furnace prac-tice on reverberatory smelting is effect-ing even greater economies than were anticipated."

Proved ore reserves on Dec. 31 last

Proved ore reserves on Dec. 31 last aggregated 205,606,715 tons. In the year 670,489 tons of ore were added to the

"In spite of the depression," the report says, "nickel products more than retained their relative industrial position. The 1931 consumption of nickel in its largest market, the United States, amounted to 160 per cent of the average for the years 1920 to 1922 and to 85 per cent of the average from 1926 to 1927, whereas similar figures for automobile and truck production in the United States were 115 per cent and 60 per cent, respectively."

The report says that although the amount of nickel cast iron produced in 1931 was less than in 1930, there was an increase of about 20 per cent in the nickel used in cast iron to each ton of iron castings produced.

SUGAR

TEAVY selling by Cuban interests drove sugar prices down to new low levels, futures sales being made as low as 0.75 cent a pound Tuesday in the case of the May contract. That contract closed at 0.78 Tuesday, against 0.88 a week ago; the March contract was

inactive, except for one transaction last week. The opening meeting of the sugar conference at Paris, scheduled for March 14, was postponed to the next day; whether theirs will be more successful than previous efforts in ironing the differences between Cuba and Java remains to be seen.

RUBBER

THE local rubber market declined over the week-end in sympathy with the decline in London, where market support was lacking, pending the outcome of the restriction negotiations. The March contract closed at 3.42 cents

pound Tuesday in New York, against 3.56 a week ago.

Commodities

WORLD CRUDE RUBBER MOVEMENT (Long tons; as reported by the Rubber Exchange of New York)

	Year.	Year.	Ch'ge
New York Receipts: March 1-14 February January December	8,437 23,303 25,873 43,773	5,936 36,088 30,906 29,876	+ 42.1 - 35.4 - 16.3 + 46.5
	Week I Mar. 12, 1932.	Ended Sa	Mar. 13. 1931.

February crude rubber consumption in this country was 4.2 per cent above a year ago and 7.3 per cent above January, although a seasonal decline of 3.5 per cent is usual for the month. Imports were also lower than in either January, 1932, or February, 1931. Stocks, however, were much higher.

Tire production in January was 17 per cent above that of December, although 5.8 per cent under a year ago. Shipments also have increased, although they too, like production, are well under those of the same month last year. Stocks at the end of January were a little higher than a month earlier, but 11.7 per cent under

News of Foreign Securities

ONDON-The death of Ivar Kreuger and its possible effects were the chief topics on the Stock Exchange on Monday. The tragic passing of the Swedish match king was held largely responsible for

largely responsible for a drop in sterling, the New York rate opening at \$3.60 ½ but subsequently recovering to \$3.62 ½. Dealings in Kreuger & Toll and Swedish Match issues were suspended for a time until an agreement could be reached to fix quotations. Swedish B and Kreuger & Toll both were lowered to £2 nominal but quoted on a basis of £1 3s. More confidence pervaded the markets later as dealings began in Swedish issues, prices improving slightly. Apart from securities directly concerned with Mr. Kreuger's death, most of the internationals, gilt-edged industrials, oils and minings were marked down.

The stock markets were more confident

and minings were marked down.

The stock markets were more confident on Tuesday. Although business was quiet prices were better in all sections. Swedish Match and Kreuger & Toll shares recovered further. Eastman Kodak was marked down sharply on George Eastman's death, but there was practically no selling. On the contrary, there was buying at the lower quotations. Among the British Government funds the war loan dropped to £101%, but recovered to £101% and the conversion 3½ per cent loan was better at £82½.

but recovered to £101% and the conversion 3½ per cent loan was better at £82½.

Outstanding among the industrials was the continued demand for Cables and Wireless issues. The preference jumped to 50 per cent of par, the A to 19 per cent and the B to 11 per cent. International Nickel also was firm and recovered to \$11½ after opening at \$11½. Imperial Chemical was steady pending the dividend statement. Woolworth at 573, Unilever at £17-32, Hydroelectric at \$13¾ and Brazilian Traction at \$17¼ were all higher.

American rubber figures failed to influence the rubber market and shares moved slightly lower. Oils opened better, weakened at midday and recovered in the afternoon on Continental buying. Royal Dutch at £17 and Shell Transport at 43s 1½d both closed better. Mining stocks improved, Chartered rising to 20s and Rio Tinto Copper to £17%.

The Financial News index of thirty industrial shares on the London Stock Exchange, based on the average of 1928 as 100, stood at 63.3 on March 10. This compares with 63.7 at the end of the preceding week, with 58.7 a month ago and a low record of 53.1 at the time of suspension of the gold standard last September.

The following are closing prices on the London Stock Exchange on March 15, with net change from prices of March 8: Net Price. Change.

which developed into a bear raid on trust shares generally, facilitated by the fact that in anticipation of a strong vote for Hindenburg, the shorts covered on Saturday. Losses appeared all along the line, mostly 1 to 3 per cent and in some cases 6 to 8 per cent. Bonds were uncertain at ½ to 1½ per cent lower.

The Boerse was more buoyant on Tuesday, with an upward movement in prices, and the gains generally were well maintained at the close. Reichsbank shares especially were firm. Svenska at the opening recovered three-eighths from Monday's slump, then sagged, but still closed 23 per cent above Monday's quotation. The bond market was firmer.

A stimulating effect on business is expected from the von Hindenburg vote, which is regarded as offsetting a decline in Germany's export balance for February, which in itself is considered not so unfavorable under the circumstances.

Except for steel shares, which advanced owing to hopes of orders from Russia and from the government under the unemployment relief scheme, stocks predominantly declined, and for the most part ended last week two to five points below prices of a week ago. Farbenindustrie was heavily sold owing to expectation of sharp dividend reduction; it has lost eight points in the week.

Contrary to precedent, bonds continued weak after the cut in the bank rate, the reason apparently being that the interest yield on securities is ignored by investors, who just now consider only the "safety factor." Difficulties of the Michael real estate concern depressed mortgage bonds. March 11 approximate prices of the unofficial stock market compare as follows:

Mar.11. Mar.4. Feb.26.
Reichsbank 114 115 111
Deutsche Bank 45 45 35

Rhenish Westphalian Electricity closed at 73, Mannesmann Tubes closed at 39.

Ivar Kreuger's death dominated the entire session of the Bourse on Monday, even to the exclusion of the German elections, which scarcely drew comment. The market opened with declines averaging 10 per cent, and though there was a brief rally at midday, the Bourse closed with price levels even below those of the

opening. Rentes, in contrast to the general de-

Rentes, in contrast to the general depression, remained firm.

The Bourse rallied on Tuesday from the slump caused by the death of Ivar Kreuger. Financial circles, considering that a relatively small part of the market was directly related to the Kreuger interests and the comparative calm with which the news of Mr. Kreuger's death was received in London and New York, apparently agreed that Mondays' drop of over 10 per cent was excessive and on Tuesday the trend was steadily upward. The announcement of the Banque de Paris's reduction of its dividend from

100 to 60 francs did not produce an unfavorable reaction, in fact, that institution's shares joined in the recovery.

The mid-month settlements were accomplished with money heavy. On the Bourse floor the rate generally was one-eighth of 1 per cent, and there were fewer carry-overs at par than at recent settlements.

Rentes were little traded, but remained firm, closing as follows: The 3 per cents, 79.30; 1917 4s, 94.95; 1918 4s, 94.95; 1915 5s, 100.85; 1920 amortizable 5s, 124.90; 1928 5s, 102.07; 1920 6s, 104.10; 1927 6s, 108.

108.
The official index of average Bourse prices during February works out at 294, which compares with 250 in January and with an average of 308 in 1931. Separate groups of securities compare as follows:

lows.			
	Feb.	Jan	Av
	1932.	1932	1931.

United Steamship Company, Ltd.

United Steamship Company, Ltd.
Brown Brothers Harriman & Co. have received cable advices indicating that net earnings after ordinary depreciation of the United Steamship Company, Ltd. (of Copenhagen), for the year ended Dec. 31, 1931, amounted to \$462,293, as against interest charges on the 6 per cent external sinking fund bonds, 1937, of \$132,790. Brown Brothers Harriman & Co. point out that the foregoing figures, having been received by cable, are subject to correction because of possible transmission errors. For the year 1930 net earnings of the company after ordinary depreciation amounted to \$1,345,293.

Yokohama Specie Bank

Yokohama Specie Bank
The report of the Yokohama Specie Bank, Ltd., presented at the 104th meeting of shareholders in Yokohama, showed profits of 5,339,946 yen for the six months ended on Dec. 31, after making provisions for bad and doubtful debts, rebates on bills and other charges, compared with 5,401,791 yen for the first half of the year. The report, which covers the period in which the bank was engaged as the fiscal agent of the Japanese Government in supporting the yen, indicates no apparent losses through these operations.

Earnings for the second half of the year translated into dollars at the current rate of exchange amount to approximately \$1,779,982, against approximately \$1,800,597 for the first half of the year, also at the current rate of exchange.

Keystone Watch Case Corporation

Stockholders of the Keystone Watch Case Corporation have approved a plan to reduce the capital stock to \$1,200,000 from \$1,500,000 and to change to \$20 from \$25 a share the par value of the 60,000 shares of common stock. The company will distribute \$5 a share, the amount of the reduction, to the stockholders.

Thrift Stores

Thrift Stores, Ltd., operating a chain of sixty-five grocery stores in Montreal, reports retail sales for the period from April 1, 1931, to Jan. 9, 1932, at \$2,959, 335, an increase of 25 per cent over the corresponding period the preceding year. A year ago the company had fifty-one

Security News Notes

Borden Company
The Borden Company reports a net income for 1931 of \$16,088,828, equivalent, after income taxes and provision for profit sharing, to \$3.66 a share on 4,395,281 shares of common stock. In 1930, the net income before provision for profit sharing was \$21,681,214, which was equivalent to \$4.84 a share after profit sharing deductions.

In his report to stockholders, Arthur W. Milburn, chairman of the executive committee, said that for the first time the company was showing its earnings on its capital stock, after, as well as before, provision for profit sharing.

"Such profit sharing," Mr. Milburn said, "amounted to \$723,439 last year, equivalent to 16 cents a share on the stock outstanding Dec. 31, 1931.

"Although the net earnings per share of \$3.82 before profit sharing represents the earning power of the business for the year, and such profit sharing as may be determined by the directors under the plan is a distribution therefrom to hundreds of eligible officers and employes, it is nevertheless deemed best to report earnings and profit sharing distribution therefrom in this form rather than separately, as heretofore."

The company's sales last year were \$284,586,876, compared with \$345,422,778 in 1930, a decrease of 8 per cent, due, it was said, to the greatly reduced purchasing power of the consuming public. Adjustment of Canadian and export sales to United States dollar values contributed to the decline in sales last year.

Assets of the company and its subsidiaries at the end of last year were \$166,934,105, against \$189,382,216 at the end of 1930. Current assets were \$58,666,086 and current liabilities were \$15,019,234, against \$466,100,817 and \$23,591,034, respectively, at the end of 1930.

As the result of appropriations to reserves totaling \$12,229,262, and a loss of \$2,041,137, the company's surplus was reduced from \$43,077,873 at the end of 1930.

The appropriations to reserves included a charge of \$9,750,000 to provide for "extimated finance of the profits of the profits of the profits of

of profits for 1930, amounted to \$3,175,025.

The appropriations to reserves included a charge of \$9,750,000 to provide for "estimated future loss on disposal of idle, obsolete and excessively cost-valued property"; a charge of \$1,625,000 to provide for the adjustment in value of securities to at least the market value on Dec. 31, 1931, and another write-off of \$854,262, representing the adjustment of net current assets of foreign subsidiaries to the United States dollar basis. The sum of \$1,443,757 was returned to surplus from reserves no longer used for the purpose for which they were established.

panies after taxes and depreciation amounted to \$825,202, against \$1,540,202 in the previous year, the Studebaker Corporation has announced plans for a readjustment of its common-share capital and surplus accounts. The proposal will be submitted to stockholders at their annual meeting April 26.

The 1931 net balance for common stock was \$399,555 after giving effect to an adjustment for the Pierce-Arrow minority interest and after deductinug dividends on Studebaker preferred stock.. Calculated on this basis, the balance was equivalent to 20 cents a share on common stock. against \$527,716, of 27 cents a share, in 1930. Dividends of \$1.20 a share, in 1930. Dividends of \$1.20 a share were paid on the common last year, largely out of earned surplus. Net sales in 1931 were \$64,406,857, against \$86,083,939 in 1930.

The corporation sold 58,202 vehicles last year, against 67,269 in 1930, a decrease of 13.5 per cent, compared with a decrease of 30 per cent for the entire industry.

Current assets on Dec. 31 were \$30,

crease of 30 per cent, compared with a decrease of 30 per cent for the entire industry.

Current assets on Dec. 31 were \$30,-932,334, against current liabilities of \$13,643,753. This compares with current assets of \$29,740,005 and current liabilities of \$10,586,305 at the end of the preceding year.

The proposed readjustment contemplates the return to surplus account of \$33,051,520 from the common stock capital account so that this may be available "for carrying out the directors' desire to write down the 'trade name, good-will and patent rights' account from \$19,807,-276 to \$1 and to write down the book value of investments in plant facilities and for other purposes."

Mr. Erskine explains the plan as follows:

value of investments in plant facilities and for other purposes."

Mr. Erskine explains the plan as follows:

"In 1920, '22 and '29, the corporation declared stock dividends equivalent to 826,288 shares of its present no par stock. These shares were capitalized at \$33,051,520, or \$40 per share. Common stock capital account was accordingly credited with this amount, and surplus earnings were charged the same amount. This action reduced the surplus account on our books, to \$15,975,737.27 as of Dec. 31, 1931, as shown by this report, including special surplus account of \$8,100,000 which was established under charter requirements in respect to the purchase and retirement of preferred stock.

"The transfer of \$33,051,520 from capital to surplus would leave the common capital \$23.15 per share, instead of \$40 per share as at present. Your directors believe it advisable that at the same time \$3.15 per share additional should be transferred from capital to surplus to make the common capital, after such transfer, a round figure of \$20 per share. No part of this transferred surplus might be used for dividends on the common stock as long as any of the preferred stock remained outstanding.

"If the write-down of plant facilities is made, substantial savings would result to the corporation in depreciation and other charges, thereby benefiting the profits of future years. Last year our charges against profits for depreciation alone amounted to \$2,251,586.48, or \$38.95 per car produced."

The Pierce-Arrow Motor Car Company, a subsidiary, reported a net loss after depreciation, interest, Federal taxes and other charges of \$476,943, compared with a net profit of \$1,317,070, equivalent under participating provisions to \$2.42 a share on Class A stock in the preceding year.

United States Rubber Company.

United States Rubber Company.

United States Rubber Company.
The United States Rubber Company reports for 1931 a consolidated net loss of \$9,473,404 after interest, depreciation, adjustment of inventories and other charges and credits. Among the other charges were \$2,716,206 adjustment of inventories, \$1,214,497 loss on foreign exchange and \$101,591 adjustment of securities. Among the credits were a reserve of \$2,160,641 against these three items and \$2,304,149 representing the difference between the par value and purchase price of bonds and notes bought for redemption.

In the preceding year there was a net loss of \$18,063,941 after all ordinary and extraordinary charges. Surplus deficit at the end of 1931 was \$16,593,460, against \$7,120,056 at the end of the preceding year. In 1931 the interest requirements on funded indebtedness of the company were reduced from \$5,576,791 to \$4,892,-

736. Outstanding funded and long-term indebtedness was reduced by \$9,314,353.

The balance sheet shows current assets of \$62,605,969, including \$13,181,028 in cash, and current liabilities of \$7,625,038, leaving a net working capital of \$54,980,-931. The 1930 balance sheet shows current assets of \$84,147,643, including \$8,926,147 in cash, and current liabilities of \$11,729,006, leaving net working capital of \$72,418,637.

Universal Pictures

Universal Pictures

Operating for the first full year under its plan of amortizing negative and positive costs on the basis of experience tables, Universal Pictures, Inc., shows a net profit of \$615,788 for the year ended Oct. 31, 1931, in its preliminary report, against a net loss of \$2,047,821 in the preceding fiscal year.

Because of the new basis, the company states, revenue from pictures released in previous years the cost of which had already been written off is included in the current year's report. Current assets on Oct. 31 were \$8,873,344 and current liabilities \$2,270,606.

Total surplus was \$3,652,018, of which \$2,194,125 was earned surplus.

Robert Mitchell Company

The Robert Mitchell Company, Ltd., reports for the year ended Dec. 31, 1931, profit of \$60,725, after charges but before Federal tax provision, comparing with \$143,188 in 1930.

Charles Gurd & Co.

Charles Gurd & Co.

Charles Gurd & Co., Ltd., for the year ended Dec. 31, 1931, reports net profit of \$136,550, after depreciation and Federal taxes, equivalent, after 7 per cent preferred dividends, to \$1.97 a share on 60,000 no par shares of common stock. This compares with \$196,837, or \$2.95 a common share in 1930.

Current assets as of Dec. 31, last, were \$345,187 and current liabilities were \$40,-148.

Penmans, Ltd.

Report of Penmans, Ltd., shows profit of \$145,034 after interest, bad debts, &c., but before depreciation, taxes, &c., comparing with profit of \$189,262 in preceding year.

Security News Notes

Postal Telegraph and Cable Corp.
The report of the Postal Telegraph and Cable Corporation for 1931 shows a net loss of \$1,764,032 after charges, taxes and depreciation, contrasting with a net income of \$96,769 in 1930. Net surplus on Dec. 31 last, after \$210,905 exchange losses on net current assets, the major part of which is applicable to those countries which suspended the gold standard in 1931, and sundry surplus debits, amounted to \$9,080,634, comparing with a paid-in surplus of \$11,058,072 at the end of 1930.

In 1930 there was a deficit of \$2,040.

end of 1930.

In 1930 there was a deficit of \$2,040,-296 after dividends, and deductions of \$2,442,592 were made for extraordinary expenditures incurred in developing busi-

ness, &c., and \$754,423 for earthquake damages. There was a credit to surplus of \$9,158,850 in that year, resulting from the sale of common stock at \$40 a share, of which \$15 a share was credited to paid-in surplus, so that surplus at Dec. 31, 1930, was \$11,058,072, comparing with \$7,138,148 at the start of the year.

Total earnings in 1931 amounted to \$34,187,242, against \$37,923,357 in 1930. Telegraph, cable and radio operating revenues were \$32,483,785, against \$36,136,111, and amounts received from interest, dividends and other sources were also lower. Operating and general expenses, taxes and depreciation aggregated \$33,363,262 in 1931, against \$35,020,662 in 1930, leaving net earnings of

\$823,980, against \$2,902,696. The amount available for bond interest, after charges of associated companies, was \$769,479, against \$2,630,234 in 1930.

Safeway Stores, Inc.

Safeway Stores, Inc.

Despite a decrease of 6.1 per cent in sales, a rise in net income was reported for 1931 by Safeway Stores, Inc., and subsidiaries, including MacMarr Stores, Inc., from July 1. Net was \$5,415,590 after depreciation, interest, Federal taxes and other charges, equivalent after preferred dividends to \$6.34 a share on the 717,503 average number of common shares outstanding.

In the preceding year the net was \$3,749,901, equal to \$4.82 a share on the 634,820 average number of common shares outstanding. Net sales reported for 1931 were \$284,926,151, against \$303,-

539,346 in 1930. The average number of stores in operation, including 1,854 with meat markets, was 3,264, while in 1930 there were 2,675, of which 1,489 had meat markets.

Perfect Circle Company

Earnings of the Perfect Circle Company during 1931 set a new high record and showed an increase of 48 per cent over 1930. Net income for the year ended Dec. 31, 1931, after all deductions, including taxes and depreciation, amounted to \$901,831, equivalent to \$5.55 a share on the 162,500 shares of common stock outstanding. This compares with \$608,503 for the preceding year, or \$3.74 a share on the same number of shares.

Security News Notes

Radio Corporation of America

Radio Corporation of America
Included in the pamphlet report of
Radio Corporation of America showing
a net income of \$768,903 for 1931, equal
to \$1.95 a share earned on 395,597 A
preferred shares, is a consent form
through which common and Class A
stockholders may assent to a \$45,258,200
reduction in capital and surplus proposed
by a committee appointed by the directors. In 1930, net income was \$5,526,293,
equal to \$13.97 a share on the Class A
shares.

tors. In 1930, net income was \$5,526,293, equal to \$13.97 a share on the Class A shares.

The plan submitted by the committee, following conferences with executive officers of the company, recommends first, that the 36,100 shares of Class B preferred stock and the 30,060 shares of common stock in the treasury of the corporation be retired.

Second, that the capital represented by the common stock be reduced from about \$4.22 a share to \$2 a share.

Third, that against capital surplus so created there be charged a total of about \$21,733,500 for reduction of book values of certain fixed assets and reserves for certain investments and contingencies of the company and subsidiaries, and that the balance of about \$8,323,900 remaining be not available for dividends, but be added to the general reserve, increasing it to \$9,823,900.

Fourth, that against earned surplus of \$26,528,600 there be charged about \$15,200,800, representing cost of treasury stock retired, write-down of inventories and reserve for certain investments and contingencies, after which adjustments the earned surplus will be \$11,327,789.

The consolidated balance sheet in the annual report gives effect to this revision. Consent of a majority of the total number of outstanding shares of the company having voting power is necessary.

pany having voting power is necessary. The B preferred stock has no voting

preferred stock has no voting power.
Gross income from operations was \$100,124,847, against \$132,261,908 in 1930, and costs and expenses were \$91,-099,218, against \$122,115,230. Other income was \$2,520,573, against \$4,775,688, making total income of \$11,546,202, against \$14,922,366 in 1930. An amount of \$7,842,912 was charged to depreciation and \$965,206 to loss on foreign exchange, against \$6,632,557 depreciation in 1930. In the revised balance sheet fixed assets are carried at \$44,242,620, after reserves, including \$4,863,363 patents, contracts and similar assets at cost, less reserves, against \$3,838,234 the year before, of which \$3,462,463 were patents and similar intangibles.

Investments at cost, less reserves, were

before, of which \$3,462,463 were patents and similar intangibles.

Investments at cost, less reserves, were \$26,760,893 at the end of 1931, against \$32,279,526 the year before. Current assets amounted to \$45,415,701, including \$23,916,409 cash and \$613,458 marketable securities, against \$70,434,678, including \$20,379,115 cash and \$903,425 at the end of 1930. Inventories were \$8,294,269 at the lower cost or market, against \$28,-253,713 the year before.

Current liabilities amounted to \$24,-661,626 at the end of 1931, including \$17,729,719 due to General Electric and Westinghouse companies, against \$34,-680,073, including \$18,182,592 due to the electric companies, at Dec. 31, 1930. Notes payable of \$5,000,000 at the end of 1930 were eliminated in 1931.

Radio-Keith-Orpheum Corporation

Radio-Keith-Orpheum Corporation.

The Radio-Keith-Orpheum Corporation, in the first statement of earnings issued since its reorganization last year, reports for 1931 a net loss of \$5,660,770 after "extraordinary charges" of \$2,577,834 and dividends of \$461,473 paid on preferred stocks of subsidiary companies. This contrasted with a net profit of \$3,385,628 in 1930 before non-recurring profits, equivalent to \$1.40 a share on the company's old Class A stock.

In a letter to stockholders, Hiram S. Brown, president of the company, said the loss from operations for 1931 before payment of dividends on the preferred stock was \$2,576,602, "without taking into account a net loss of \$44,860 from the sale of investments and capital assets, and excluding \$1,500,000 of the loss from the operation of the properties of R. K. O. Pathé Pictures, Inc., and its subsidiaries, for which a reserve was created to provide for losses expected at the time of acquisition, pending complete organization.

"In addition to the loss from opera-

"In addition to the loss from opera-tion," Mr. Brown said, "extraordinary items have been charged to profit and loss account for 1931 in the amount of

\$2,577,834, representing charges, writaoffs and deductions in respect of unabsorbed salaries of artists, abandoned picture productions, amortizations of organization, development and experimental
expenses, provisions for deposits and
losses on foreign exchange, which from
the standpoint of future operations the
management has deemed it advisable to
make as of Dec. 31, 1931, and also representing an acceleration of the basis for
amortizing the cost of pictures."

Mr. Brown said that under the plan of
refinancing approved by the stockholders
in December the purchase price of debentures and stock sold was \$11,600,000,
of which \$5,981,887 has been paid, the
balance being payable on call.

The company's balance sheet as of
Dec. 31, 1931, showed current assets of
\$26,878,694, including cash of \$3,844,614,
compared with current assets as of Dec.
31, 1930, of \$15,200,615. Included in the

\$26,878,694, including cash of \$3,844,614, compared with current assets as of Dec. 31, 1930, of \$15,200,615. Included in the current assets as of Dec. 31, 1931, were subscriptions to debentures and stock of \$10,674,170 and inventories of \$9,622,624. Current liabilities were \$9,527,875, including notes and debentures payable of \$5,581,742. This compares with current liabilities of \$5,702,481 at the end of 1930. The statement declares that the corporation is a party to a joint and several guaranty to insure the repayment of a loan of \$400,000 by an affiliated company.

ment of a loan of \$400,000 by an affiliated company.

In the reports for 1931 of the Keith-Albee-Orpheum Corporation and the Orpheum Circuit, Inc., subsidiaries of Radio-Keith-Orpheum, Mr. Brown said a thorough study of the properties of the corporation and its subsidiaries was being made to determine to what extent the book values of these properties should be revised. The Keith-Albee-Orpheum Corporation reported a net profit of \$1,620 applicable to the interests of the company after dividends of \$250,204 on subsidiary company's preferred stock not owned by Keith-Albee-Orpheum.

The Orpheum Circuit reported a net loss of \$798,621 in 1931.

Western Electric Company

Western Electric Company

Net income of the Western Electric Company, Inc., amounted to \$10,816,387 in 1931, equal to \$1.80 a share earned on 6,000,000 common shares, compared with \$15,624,839, or \$2.60 a share, earned on the same number of shares in 1930. Surplus after dividends of \$1.75 a share in 1931 was \$316,387, comparing with a deficit of \$7,625,161 in 1930, when \$4 a share was paid.

Sales amounted to \$228,955,524, against \$361,478,438 in 1930, and net profits on sales were \$9,268,626, compared with \$12,151,980. Other income, net, was \$6,288,987, against \$8,145,632, and interest deductions were \$4,741,226, contrasted with \$4,672,773.

At the beginning of 1931 the manufacturing department was operating at 66 per cent of normal activity and had 39,484 employes working an average of five days a week each. The spreading work among as many persons as possible enabled the department to maintain at the end of the year a force of 28,187 employes, with plants operating at 44 per cent of normal.

On Oct. 30, 1931, Western Electric acquired the business of the Nassau Smelting and Refining Company and the plant and inventory of the Tottenville Copper Company on Staten Island. This provides facilities to carry on more completely and more economically the reclamation of scrap metals resulting from

nanufacturing operations and from ma-erial removed from the Bell System

plant.

Total assets on Dec. 31, last, amounted to \$370,833,178, against \$379,301,959 the year before. Plant was \$171,028,187, against \$163,817,832, and investments and advances in and to subsidiary and associated companies were \$78,217,496, contrasted with \$75,041,557.

Current assets were \$121,587,493, including \$4,352,379 cash, against \$140,442,570, including \$8,080,441 cash the year before. Current liabilities were \$28,495,898, including \$14,741,764 notes payable, against \$50,900,715, including \$30,000,000 notes payable the year before. Reserves were \$84,266,146, against \$74,988,375, and surplus was \$7,248,171, compared with \$6,631,784. \$74,988,375, and surplus compared with \$6,631,784.

Westinghouse Electric and Manufactur-ing Company

ing Company
The annual report of the Westinghouse Electric and Manufacturing Company for 1931 shows a net loss of \$3,655,660 after charges, taxes, depreciation and provision for foreign exchange losses, comparing with a net income of \$11,881,705 for 1930, equal to \$4.46 a share earned on combined 79,974 preferred and 2,586,341 common shares.

mmon shares. After dividends of \$6,996,549 in 1931, e deficit of \$10,652,209 was charged to After dividends of \$6,996,549 in 1931, the deficit of \$10,652,209 was charged to surplus, comparing with a deficit of \$1,445,023 after dividends in 1930. In addition, \$2,054,005 provision for decline in value of securities and \$3,617,374 revaluation of investments in companies not previously consolidated and other miscellaneous items were charged to surplus in 1931. Surplus on Dec. 31, 1931, was \$79,050,324, against \$95,373,912 at the end of 1930 and \$96,818,935 at the close of 1929.

"The results of the operations of the company for the year 1931 reflect the rate of business which was current throughout the country," A. W. Robertson, chairman, and F. A. Merrick, president, say in their report.

"Sales billed by the company and its manufacturing subsidiaries for 1931 were \$115,393,082, compared with \$180,-283,579 for 1930 and \$216,364,588 for 1929.

"Orders received by the company and

283,579 for 1930 and \$216,364,588 for 1929.

"Orders received by the company and its manufacturing subsidiaries during the year totaled \$128,014,820, a decrease of \$42,295,447, or 24 per cent, from 1930 and a decrease of 46 per cent from 1929. Because of certain orders for large equipment, notably electric locomotives for the Pennsylvania Railroad electrification, the value of unified orders on hand at Dec. 31, 1931, was \$40,024,390, approximately the same level as at the close of 1930."

The companies included in the consolidated statements are the Westinghouse Electric and Manufacturing Company, Westinghouse Electric Elevator Company, Bryant Electric Company, Inc., and Westinghouse Electric International Company, including its owned companies.

The Westinghouse Electric Supply Company in 1931 did a business of \$37, 356,496, comparing with \$46,687,985 in 1930 and \$54,292,079 in 1929. Its operations resulted in a substantial profit until 1930 and 1931, the report says. Merchandise inventories of the company were written down to conservative valuations at the end of 1931 and ample re-

Merchandise inventories of the company were written down to conservative valuations at the end of 1931 and ample reserves have been set up against doubtful receivables, the report says.

Plant, less reserves, totaled \$73,539,936 at the end of 1931, against \$72,272,128 the year before. Total investments were \$47,245,326, against \$57,682,403.

Current assets amounted to \$100,522,-

Position of the Tire Industry

Continued from Page 512

by an expanding market is in itself evidence of stabilization. In the next few years the pressure of the excess capacity now prevalent in the tire industry will become more pronounced, because tire prices are near a "cost-of-production" basis, at which all prices tend eventually to stabilize.

The tire industry is a paradox. It is the only one among all of our so-called mass-production industries which did not enjoy several years of very profitable

when its production highest. In 1929, the year of greatest tire production, the four largest rubber manufacturers earned only 7 per cent on the aggregate capital. In the same year the largest steel corporations, with 80 per cent of ingot capacity, earned 10 per cent, and automobile manufacturers selling 80 per cent of all cars earned 21.5 per cent on their combined capital. The rubber industry, with a much faster capital turnover than steel makers, and with as high a rate of turnover as motor car makers, was much less inefficient in the use of its capital.

487, including \$20,585,564 cash, \$1,828,584 United States Government securities at market and \$9,734,580 other marketable securities at market, against \$115,104,125 at the close of 1930, including \$24,081,334 cash, \$3,450,275 United States Government securities and \$5,091,125 other marketable securities, all at market. Notes and accounts receivable, less ket. Notes and accounts receivable, less reserves, were \$28,754,283, against \$37,-206,125, and inventories, at cost or less, were \$39,619,472, against \$45,237,405. Current liabilities were \$7,368,011, against \$15,186,859 the year before. The income accounts compare as follows for two years:

Net sales	\$115,393,082	1930. \$180,283,579 171,971,118
Loss from sales Op. loss of subsid	\$4,537,980 1,645,381	*\$8,312,461
Gross loss	\$6,183,361 1,715,842 1,434,311	\$1,730,217 1,843,528
Total loss	\$3,033,209 622,451	*\$11,856,206
Interest charges	022,401	4 500

Net loss...... \$3,655,660 *\$11,881,706 *Profits. Youngstown Sheet and Tube Company

Youngstown Sheet and Tube Company
The Youngstown Sheet and Tube Company reports a net loss for 1931 of \$7,856,889 after all charges and preferred dividends. The loss is equivalent to \$6.55 a share of common stock. For 1930 the company reported a net profit of \$6,211,132, equal to \$5.02 a share.

A net profit of \$2,309,069 from operations was augmented by other income to a total of \$3,758,864. Interest charges, however, were \$4,363,571 and depreciation was \$6,437,806. The surplus was reduced \$11,700,899 to \$40,281,501.

Net sales fell nearly 50 per cent from \$111,057,927 in 1930 to \$59,487,008 in 1931.

Current assets of \$73,238,379, including \$13,543,192 in cash and government securities, exceed current liabilities of \$6,067,148, resulting in a ratio of more than 12 to 1.

Lehigh Coal and Navigation Company

Lehigh Coal and Navigation Company
The pamphlet report of the Lehigh
Coal and Navigation Company for 1931
shows net income amounting to \$2,360,209, after expenses, taxes and charges,
equal to \$1.22 a share earned on 1,930,065 shares, compared with \$2,534,566, or
\$1.31 a share, in 1930. Total revenues
for 1931 were \$4,007,738, against \$4,258,178 in 1930. There was a surplus after
dividends of \$44,131 for 1931, comparing
with a deficit of \$134,962 the year before.
These figures reflect net income accruing from the company's direct operations and from railroad rentals, dividends and income from other sources,
but do not show the undistributed earnings and losses of subsidiary companies
owned or controlled by the company.
Giving effect to these figures, the consolidated net income of the company
amounted to \$2,062,977, excluding the
company's proportion of the undistributed earnings of other companies in
which the company has substantial holdings. The corresponding figure for 1930
was \$2,189,729.

Gross revenue of the wholly owned
Lehigh Navigation Coal Company in

ngs. The corresponding figure for 1930 was \$2,189,729.
Gross revenue of the wholly owned Lehigh Navigation Coal Company in 1931 was \$16,814,729, against \$18,830,844 in 1930, and net earnings were \$710,515, against \$598,505. Net loss after depreciation, depletion and other deductions was \$275,808, against \$453,325.

The Lehigh & New England Railroad Company reports railway operating revenue of \$4,107,459 for 1931, against \$5,065,787 in 1930, and net income of \$510,921, against \$715,802.

Canal operations for the year show a

come of \$510,921, against \$715,802.

Canal operations for the year show a net loss of \$100,499, compared with a net loss of \$100,499, compared with a net loss of \$116,649 for the previous year. The Delaware Division Canal Company by deed dated Sept. 30, 1931, conveyed to the Commonwealth of Pennsylvania all its right, title and interest in and to the canal bed, towing path and berm-bank of the canal between Raubsville and Yardley, a distance of about forty miles, reserving certain rights. The lease to the Lehigh Coal and Navigation Company was canceled, \$800,000 bonds of the canal company were surrendered and canceled,

was canceled, \$800,000 bonds of the canal company were surrendered and canceled, and the mortgage of the company was satisfied of record.

The consolidated balance sheet on Dec. 31, 1931, shows current assets of \$12,-377,894, including \$3,429,485 cash, and current liabilities of \$4,151,482. Surplus was \$24,327,588, including \$12,450,317 earned surplus. Reserves were \$16,-240,243.

1931 **EDITION** The **AMERICAN** YEAR BOOK

Now Ready

The American Year Book presents clearly, concisely and authoritatively the essential facts of significant and relative events in America-year by year interpreting them impartially from an expert and disinterested point of view. A ready reference to Economics, and Business, Government, Politics, Religion, Labor, Engineering, Chemistry and Physics, Biological Sciences, Literature, the Arts, Music, Drama, Education.

Public Opinion (London) states:

Public Opinion (London) states:

"Not merely a reference book that stands from year to year with only a revision of details, but a freshly-written survey of the political, scientific, commercial, religious and literary history of the United States during the past year. There is nothing quite like it in this country, and we may envy the American citizen, who in this volume can find on his desk current history set forth, complete, readable and authoritative."

"Libraries and newspapers need it as a book of almost daily reference," is the way The Boston Globe appraises The American Year Book. The Political Science Review (Paris) says: "We owe new and warm felicitations to the editors of this remarkable collection for the zeal and regularity with which they place within the reach of the educated world this incomparable treasure of information. The searchers will find in this new volume the complete panorama of American life and activity during the year that has passed away.'

The Philadelphia Public Ledger says:

"Written by an impressive list of contributors, with the endorsement of virtually every important learned society, the American Year Book represents an almost official stocktaking of the netter." taking of the nation."

Single Volume \$7.50 in United States and Canada. Other Countries, \$8

A record of seven years' achievements in American progress, covering the years 1925, 1926, 1927, 1928, 1929, 1930 and 1931, at the combined price of \$26.00 in the United States and Canada-\$28.00 in other countries. Delivery of the seven volumes, 1925-1931 inclusive, will be made immediately on receipt of order.
